Media Transparency in China Baohui Xie,2014-08-20 This book argues that the gap between the official transparency rhetoric and the censorship reality has demonstrated the discrepancy between what the Party is and what it claims to be Such a discrepancy is manifested by the reality that the reformed news industry a hybrid of market oriented commercialization and party state control has largely failed to deliver either the voice of the disenfranchised groups or the value of journalism To observe the discrepancy this book investigates the role of transparency in the Chinese news media Media transparency which goes beyond the issue of censorship and press freedom has been undermined by the consensus reached between the party state and the media on political and market control It is this mutually accommodating and benefiting scheme between power and profits that has been hollowing out the substance of the transparency rhetoric and distorting the Marxist idea of press freedom as freedom for all This book argues that the cause of such a gap between rhetoric and reality is rooted in the disjuncture of political representation of both the party state and the profit seeking media

Video Error Concealment Techniques for Multi-Broadcast Reception of Digital TV Tobias Tröger,2012-10-02 Abstract The transmission of digital TV signals to mobile receivers is often error prone As most TV broadcasting techniques provide only moderate error robustness horizontal lines of consecutive image blocks are lost during decoding of the received video signals In order to ensure high viewing experiences these lost slices have to be filled by error concealment techniques However the reconstruction qualities of classical approaches which exploit spatial temporal or spatio temporal signal correlations are not convincing yet In the future mobile TV receivers will support different broadcasting techniques in parallel As a result an erroneous high resolution video signal and a correctly received low

resolution video signal both representing the same TV service will often be available. Focusing on the outlined scenario for multi broadcast reception of digital TV signals this thesis introduces the novel category of inter sequence error concealment algorithms. The basic idea is to fill lost slices of the high resolution video signal by the interpolated low resolution video signal. Since the images of this reference signal are often cropped and delayed robust spatio temporal image alignment is crucial. By including a pixel based or a feature based alignment scheme the proposed concealment algorithms provide excellent visual qualities and outstanding reconstruction qualities of up to 41 dB PSNR. Classical concealment techniques are outperformed by up to 15 dB PSNR. To further enhance the reconstruction quality several extensions are introduced. First the alignment robustness and the interpolation quality are increased. Subsequently a classical temporal approach is incorporated as an alternative concealment mode to cope with low image qualities of the reference signal. Novel aspects include robust mode selection enhanced motion estimation and the reconstruction of the displaced frame differences from the reference signal. As a last extension spatial refinement tackles blurring of concealed image blocks. Missing spectral components are recovered in a frequency selective way based on approximation and extrapolation principles. By combining all relevant extensions the PSNR gain adds up to 20 dB with respect to classical concealment. Finally inter sequence error concealment is adapted to multi broadcast reception of two erroneous high resolution video signals. While spatial alignment can be omitted classical concealment of blocks being lost in both video signals and drift compensation in predictively coded frames are novel aspects. Again high visual qualities are obtained and classical concealment is outperformed by up to 15 dB PSNR.

Zusammenfassung
 Der Empfang digitaler Fernsehsignale mit mobilen Endgeräten wird meist durch Übertragungsfehler gestört. Da viele der eingesetzten Übertragungsstandards nur unzureichende Korrekturmechanismen bieten können bei der Decodierung der empfangenen Videosignale Blockzeilenverluste auftreten. Um die Verlustgebiete zu verschleiern werden üblicherweise zeitliche räumliche oder zeitlich räumliche Signalkorrelationen ausgenutzt. Die dabei erzielte Rekonstruktionsqualität ist jedoch häufig nicht zufriedenstellend. Zukünftig werden mobile Fernsehempfänger mehrere Übertragungsstandards parallel unterstützen. Durch den Einsatz dieser Mehrfachempfänger ist jedes Fernsehprogramm typischerweise in Form eines gestörten hochauflösenden Videosignals und eines ungestörten niedrigauflösenden Videosignals verfügbar. Ausgehend vom Mehrfachempfang digitaler Fernsehsignale wird in dieser Arbeit eine neue Gruppe von Verfahren zur Fehlerverschleierung beschrieben. Die grundlegende Idee dieser Ansätze besteht darin verlorene Bildblöcke des hochauflösenden Videosignals durch Blöcke des interpolierten niedrigauflösenden Referenzsignals zu ersetzen. Da das Referenzsignal häufig nur Bildausschnitte zeigt und zudem meist zeitverzerrt eintrifft ist die korrekte Bestimmung der räumlichen Abbildungsparameter und des zeitlichen Versatzes ausschlaggebend für eine hochqualitative Verschleierung. Durch den Einsatz bildbasierter oder merkmalsbasierter Schätzverfahren werden eine exzellente visuelle Bildqualität und eine außergewöhnlich hohe Rekonstruktionsqualität erzielt. Der Spitzensignal-Rauschabstand beträgt bis zu 41 dB. Herkömmliche Verfahren werden um bis 15 dB betroffen. Um die

Rekonstruktionsqualität weiter zu erhöhen werden zahlreiche Erweiterungen der beschriebenen Verschleierungsansätze vorgeschlagen. Zuerst werden die Zuverlässigkeit der Parameterschätzung und die Interpolationsqualität verbessert. Danach wird ein herkömmliches zeitliches Verschleierungsverfahren integriert, um eine niedrige Bildqualität des Referenzsignals zu kompensieren. Neue Aspekte sind dabei die robuste Wahl des besseren Verschleierungsmodus, eine verbesserte Bewegungsschätzung und die Rekonstruktion des Prädiktionsfehlers unter Verwendung des Referenzsignals. Zuletzt wird die Bildschärfe bereits verschleierter Bilder erhöht. Dazu werden fehlende Spektralanteile basierend auf frequenzselektiven Approximationen oder Extrapolationsansätzen wiederhergestellt. Durch die Kombination aller relevanten Erweiterungen wird die Rekonstruktionsqualität herkömmlicher Verfahren um bis zu 20 dB betroffen. Abschließend werden die beschriebenen Fehlerverschleierungsverfahren an ein Szenario für den Mehrfachempfang digitaler Fernsehsignale angepasst, bei dem zwei fehlerhafte hochauflösende Videosignale verfügbar sind. Während die Schätzung der räumlichen Abbildungsparameter entfällt, müssen Bildblöcke, die in keinem der beiden Videosignale korrekt empfangen wurden, durch herkömmliche Verfahren verschleiert werden. Als weitere Neuerung wird ein Verfahren zur Kompensation des Drifteffekts in prädiktiv codierten Bildern vorgeschlagen. Auch bei diesem Empfangsszenario wird eine hohe visuelle Bildqualität erzielt, und die Rekonstruktionsqualität herkömmlicher Verfahren um bis zu 15 dB betroffen.

Modelos de convergencia de medios en España I. Digitalización, concentración y nuevos soportes Legorburu Hortelano, José María, 2022-12-20 La convergencia de medios es un concepto extraordinariamente complejo, polifónico y multifacético que hace referencia en el campo de la comunicación a numerosos procesos de distinta índole: empresarial, tecnológica, organizativa, profesional y de contenidos. Así lo que inicialmente constituía una mera conjetura se plasma hoy en día en modelos concretos de aplicación imprescindibles para el sostenimiento de las empresas de comunicación en un mercado condicionado por la sobreabundancia de oferta y por la crisis económica. Esta obra recoge los resultados de la primera fase del proyecto de investigación "Estudio de los modelos de convergencia de medios en España" desarrollado por el Grupo de Investigación INCIRTV que pretende arrojar luz sobre este fenómeno que si bien se remonta varias décadas atrás se ha visto impulsado en los últimos tiempos gracias al desarrollo de Internet y de la tecnología digital y a las sucesivas oleadas de concentración que se han venido sucediendo en el mercado de los medios de comunicación.

Mobile TV - Chancen und Herausforderungen für das Marketing der Zukunft André S. Deuker, 2008-02-08 Inhaltsangabe Einleitung We are too slow and too uncoordinated to create the right conditions for a quick take up of mobile TV on a large scale in Europe. Dieses Zitat aus einem Vortrag von Viviane Reding, Mitglied der Europäischen Kommission und verantwortlich für das Themengebiet Information Society and Media auf der CeBIT Messe 2007 in Hannover, ist bezeichnend für die Gesamtsituation des europäischen Mobile TV Marktes. Mobile TV bietet eine Vielzahl ökonomischer Möglichkeiten aus der Sicht der beteiligten Parteien. Im Rahmen europäischer Pilotversuche wurden Zahlungsbereitschaften zwischen fünf und zwölf Euro für ein

beitragsfinanziertes Mobile TV Angebot erhoben. Verglichen mit dem asiatischen Raum befindet sich der europäische Mobile TV Markt mit Ausnahme Italiens jedoch noch in der Entwicklungsphase. Ein entwickelter europäischer Mobile TV Markt bietet Unternehmen eine Basis zur Ausweitung ihrer Angebote und ermöglicht damit die Erwirtschaftung von Skalenerträgen. Diese Möglichkeit ist aus Sicht der Hauptakteure Mobilfunkanbieter und Mediengesellschaften ein entscheidender Aspekt, der die Profitabilität einer Investition in das Medium Mobile TV beeinflusst, *as long as perspectives of economies of scale are not given the offer will not explode*. Das Gesamtpotential des Mediums Mobile TV besteht jedoch nicht ausschließlich aus den ökonomischen Potentialen der Hauptakteure, sondern ist vielmehr aus der gesamtökonomischen Perspektive zu betrachten. Eine Vielzahl kleinerer Unternehmen würde ebenso von einer raschen Etablierung eines Mobile TV Angebots profitieren, beispielsweise durch die Produktion und Vermarktung von Inhalten oder Softwarelösungen. Die Europäische Kommission versucht unter anderem durch die Etablierung eines einheitlichen Standards zur mobilen Rundfunkübertragung DVB-H Perspektiven und Möglichkeiten zur Erwirtschaftung von Skalenerträgen zu schaffen, um somit zur gesamtökonomischen Ausschöpfung der Potentiale des Mediums Mobile TV beizutragen. Marktprognosen sagen für den deutschen Markt im Jahr 2012 ein Potential von knapp neun Millionen Mobile TV Konsumenten voraus. Es wird davon ausgegangen, dass sich neben den beitragsfinanzierten Inhalten ein Basisangebot aus frei empfangbaren öffentlich rechtlichen Programmen etabliert und damit zusätzliche Konsumenten gewonnen werden. Steigende Konsumentenzahlen erhöhen aus Sicht beteiligter Unternehmen die Attraktivität einer Investition in ein Mobile TV Angebot.

La calidad de los contenidos audiovisuales en la multidifusión digital Miquel Francés, 2010. Durante el último año el sector audiovisual español se ha visto inmerso en una profunda transformación con la llegada de la televisión digital terrestre TDT, la entrada en vigor de la Ley General de la Comunicación Audiovisual, la nueva financiación de RTVE y la irrupción definitiva de nuevas tecnologías de distribución, consumo y creación de contenidos audiovisuales como Internet y el móvil. A todo ello hay que añadir la crisis económica que ha alterado las reglas de juego de todos los agentes implicados. En este escenario complejo y cambiante, desde el Ministerio Oficial de Contenidos y Formatos Audiovisuales de la Universitat de València consideramos que los contenidos deben situarse en una posición privilegiada en la cadena de valor de la producción audiovisual. Por ello organizamos la tercera edición de las Jornadas CONTD Contenidos para la Televisión Digital celebradas en Valencia los pasados 3 y 4 de junio de 2010, en las cuales expertos profesionales y académicos reflexionaron y debatieron sobre los llamados contenidos de calidad. Este volumen recoge algunas de las intervenciones más destacadas del encuentro.
