Brooks Simpkins,2019-03-12 Today millions of men women and children throughout the World depend upon glasses To the very many who ask as did the Author thirty years ago when he too was very shortsighted need such things be this book is of outstanding interest Written in simple words for the laity who are entitled to an understanding of their eyes this book is also of profound importance to the ophthalmic and optical professions It solves many of the problems of why eyes normal at birth develop refractive errors It also introduces methods for the prevention of Cataract and Glaucoma as well as rational treatment of these diseases The universal prescription of glasses to day is based upon an hundred years old theory that astigmatism is congenital that shortsighted eyes are permanently too long and longsighted eyes too flat and that all

adjustments of focus for near vision depend solely upon the small natural lens inside the eye incessantly changing its curvature and strength In contradiction however the Author has proved and depicts with the aid of simple diagrams that astigmatism is caused by irregular muscular tension on the pliable eyeball and that normal eyes involuntarily lengthen to produce natural shortsight for near vision automatically return to an at rest condition for distance vision and are mechanically capable of flattening for extreme distance vision or very longsight These natural processes and their activation are simply explained and clearly indicate that developed irregular shapes of the eyes are capable of correction and are not static unless so maintained by the wearing of glasses Methods of scientific correction evolved by the Author and named Oculopathy are briefly indicated The Author demonstrates that irregular muscular tensions productive of refractive errors also largely contribute to the development of Cataract and Glaucoma Light energy Margaret Abigail Cleaves,1904
