Age of Digital Fluency Maggi Savin-Baden, 2015-03-05 This is a book that I am going to have to own and will work to find contexts in which to recommend It cuts obliquely through so many important domains of evidence and scholarship that it cannot but be a valuable stimulus Hamish Macleod University of Edinburgh Digital connectivity is a phenomenon of the 21st century and while many have debated its impact on society few have researched relationship between the changes taking place and the actual impact on learning Rethinking Learning in an Age of Digital Fluency examines what kind of impact an increasingly connected environment is having on learning and what kind of culture it is creating within learning settings Engagement with digital media and navigating through digital spaces with ease is something that many young people appear to do well although the tangible benefits of this are unclear This book therefore will present an overview of current research and practice in the area of digital tethering whilst examining how it could be used to harness new learning and engagement practices that are fit for the modern age Questions that the book also addresses include Is being digital tethered a new learning nexus Are social networking sites spaces for co production of knowledge and spaces of inclusive learning Are students who are digitally tethered creating new learning maps and pedagogies Does digital tethering enable students to use digital media to create new learning spaces This fascinating and at times controversial text engages with numerous aspects of digital learning amongst undergraduate students including mobile learning individual and collaborative learning viral networking self publication and identity dissemination It will be of enormous interest to researchers and students in education and educational psychology **Foundations of Augmented Cognition** Dylan D. Zhigun, 2025-06-22 This book is the first comprehensive work on Russian Fractals in indigenous artifacts While existing works focus on universal phenomena such as liquid crystal or finance none explore the intersection between Fractals and Russia Russian Fractals in Indigenous Artifacts therefore investigates how indigenous Russian cultures have a wonderful Fractal heritage that was originally tied to socially just and ecologically sustainable social

practices including those of indigenous northern groups such as the Yakut Fractal designs originally allowed unalienated value both human and nonhuman to be visible thereby enabling just and sustainable living This book also examines how the tsarist elite encouraged the creation of unique creative masterpieces developing and strengthening traditional crafts and art of indigenous people hence Fabergé or imperial architecture Today the challenge for contemporary Russia is to reestablish the relationship between the social and ecological sustainability of indigenous cultures and practices for which we can now provide modeling and analysis Lay attempts at this have only limited success as they have based the attempts on a purely religious basis which recognizes the ecological aspects but often succumbs to authoritarian nationalism However the freely accession of indigenous peoples to Russia for the sake of national liberation has had a positive effect on enriching them with spirituality and creativity by Fractal artifacts through friendly exchanges with one another In Russian Fractals in Indigenous Artifacts Bangura and Zhigun express why there is a need for a forward thinking Fractal renaissance in Russia bringing together contemporary computational and scientific analyses with these ecologically and socially sustainable traditions

The Early Modern Global South in Print Sandra Young, 2016-03-23 Early modern geographers and compilers of travel narratives drew on a lexicon derived from cartography's seemingly unchanging coordinates to explain human diversity Sandra Young's inquiry into the partisan knowledge practices of early modernity brings to light the emergence of the early modern global south Young proposes a new set of terms with which to understand the racialized imaginary inscribed in the scholarly texts that presented the peoples of the south as objects of an inquiring gaze from the north Through maps images and even textual formatting equivalences were established between new worlds many of them long known to European explorers she argues in terms that made explicit the divide between north and south This book takes seriously the role of form in shaping meaning and its ideological consequences Young examines in turn the representational methodologies or artes deployed in mapping the whole world illustrating creating charts for navigation noting down observations collecting and cataloguing curiosities reporting events formatting materials and editing and translating old sources By tracking these methodologies in the lines of beauty and evidence on the page we can see how early modern producers of knowledge were able to attribute alterity to the southern climes of an increasingly complex world while securing their own place within it
