Paulin Hountondji and the Science Question in Africa Zeyad el Nabolsy,2025-07-18 This book offers a systematic reconstruction of Paulin Hountondji s contributions to the debate about the place of modern science on the African continent The book shows that Hountondji develops an account of modern science that is sociologically sensitive to the entanglement between modern science and colonialism on the African continent without falling into epistemic relativism about the claims of modern science It is argued that Hountondji s views on modern science express a strong historical materialist influence and that he develops a theory of science that draws both on the Hessen Grossmann hypothesis and dependency theory Thus this book brings together two strands of historical materialist thought about science that have hitherto been isolated from one another This book is of interest to scholars who specialize in African philosophy history and philosophy of science global philosophy and African studies

Representing Space in the Scientific Revolution David Marshall Miller, 2014-08-07 The novel understanding of the physical world that characterized the Scientific Revolution depended on a fundamental shift in the way its protagonists understood and described space At the beginning of the seventeenth century spatial phenomena were described in relation to a presupposed central point by its end space had become a centerless void in which phenomena could only be described by reference to arbitrary orientations David Marshall Miller examines both the historical and philosophical aspects of this far reaching development including the rejection of the idea of heavenly spheres the advent of rectilinear inertia and the theoretical contributions of Copernicus Gilbert Kepler Galileo Descartes and Newton His rich study shows clearly how the centered Aristotelian cosmos became the oriented Newtonian universe and will be of great interest to students and scholars of the history and philosophy of science
