Britain's Industrial Revolution in 100 Objects John Broom, 2023-02-22 The period of Britain's Industrial Revolution was perhaps the most transformative era in the nation's history. Between about 1750 and 1914, life and work, home and school, church and community changed irreversibly for Britain's rapidly expanding population. Lives were transformed, some for the better but many endured abysmal domestic and workplace conditions. Eventually, improvements were made to Britain's social fabric which led to the prospect of richer and more fulfilled lives for working men, women, and even children. Focusing on 100 objects that either directly influenced or arose from these changes, John Broom offers a distinctive insight into this fascinating age. With plentiful illustrations and suggestions for visits to hundreds of places of historical interest, this book makes an ideal companion for a journey into Britain's industrial past. *Canals in a Changing Britain* Jules P. Gehrke, 2024-12-15

Canals in a Changing Britain: Construction, Culture, and Environment, 1760-1968 assesses canals as a major technological system reshaping Britons' relationship with their landscape and environment for over 200 years. It offers a sustained narrative addressing canal construction in the late eighteenth century, living and working communities alongside canals in the nineteenth century, canals' relationship to concerns regarding deindustrialization in the early twentieth century, and canals as sites for the experience of nature and rural life in the postwar era between 1945 and 1968. This book makes use of a variety of archival and published material on canals and references academic publications on histories of technology and the environment, as well as scholarship related specifically to canals. It argues contemporary conversations regarding the current and future use of canals as multifaceted sites of recreation, leisure, heritage, and experience of the natural environment in Britain must be seen in the context of an arc of historical experience between 1760 and 1968. **Book of**

Canals Nigel Crowe, 1994 The birth of the inland waterways network over 200 years ago changed the face of the countryside forever. Canals were the heavy goods routes of pre-railway Britain. In this book, Nigel Crowe recaptures the atmosphere of this momentous transport revolution which can be seen today in the surviving 2000 miles of canals now managed by British Waterways. The BP Book of Industrial Archaeology Neil Cossons, 1975 **The Early Pioneers of Steam** Stuart

Hylton, 2019-11-22 We think of the Stephenson and Brunel as the fathers of the railways, and their Liverpool and Manchester and Great Western Railways as the prototypes of the modern systems. But who were the railways' grandfathers and great grandfathers? The rapid evolution of the railways after 1830 depended on the juggernauts of steam locomotion being able to draw upon centuries of experience in using and developing railways and of harnessing the power of steam. Giants, the Stephenson and others may have been, but they stood upon the foundations built by many other, considerable if lesser-known talents. This is the story of those early pioneers of steam. **The World's First Railway System** Mark Casson, 2009-09-10 The British railway network was a monument to Victorian private enterprise. Its masterpieces of civil engineering were emulated around the world. But its performance was controversial: praised for promoting a high density of lines, it was also

criticised for wasteful duplication of routes This is the first history of the British railway system written from a modern economic perspective It uses counterfactual analysis to construct an alternative network to represent the most efficient alternative rail network that could have been constructed given what was known at the time the first time this has been done It reveals how weaknesses in regulation and defects in government policy resulted in enormous inefficiency in the Victorian system that Britain lives with today British railway companies developed into powerful regional monopolies which then contested each other's territories When denied access to existing lines in rival territories they built duplicate lines instead Plans for an integrated national system sponsored by William Gladstone were blocked by Members of Parliament because of a perceived conflict with the local interests they represented Each town wanted more railways than its neighbours and so too many lines were built The costs of these surplus lines led ultimately to higher fares and freight charges which impaired the performance of the economy The book will be the definitive source of reference for those interested in the economic history of the British railway system It makes use of a major new historical source deposited railway plans integrates transport and local history through its regional analysis of the railway system and provides a comprehensive classified bibliography
