Cohen, Niels Birbaumer, 2016-10-06 The impaired brain has often been difficult to rehabilitate owing to limited knowledge of the brain system. Recently advanced imaging techniques such as fMRI and MEG have allowed researchers to investigate spatiotemporal dynamics in the living human brain. Consequently, knowledge in systems neuroscience is now rapidly growing. Advanced techniques have found practical application by providing new prosthetics such as brain machine interfaces, expanding the range of activities of persons with disabilities or the elderly. The book's chapters are authored by researchers from various research fields such as systems neuroscience, rehabilitation, neurology, psychology, and engineering. The book explores the latest advancements in neurorehabilitation, plasticity, and brain machine interfaces among others and constitutes a solid foundation for researchers who aim to contribute to the science of brain function, disabilities, and ultimately to the well-being of patients and the elderly worldwide.
