Neuroscience From The Molecular To The Cognitive Volume 100 Progress In Brain Research:

Neuroscience: From the Molecular to the Cognitive Floyd E. Bloom, 1994-07-19 This hundredth volume is a commemorative milestone in the prestigious Progress in Brain Research series Accordingly authors were invited to write on any topic given that their choice represented the topic most near and dear to their own efforts over a significant period of the recent past and to which they would likely continue to be devoted in the future In that sense this volume does not represent a scientific meeting but rather an overview sample of problems and methodologies that epitomize brain research broadly at this special moment in the maturation of the field The chapters comprising this volume assort themselves readily into five or six established categories of topics developmental brain research molecular brain research integrative brain research neuroplasticity and neuro psychiatric conditions This volume reports through a sample of recognized leaders in the neuroscientific community at a significant instant in the history and evolution of the field

The Self-Organizing Brain: From Growth Cones to Functional Networks M.A. Corner, F.H. Lopes da Silva, H.B.M. Uylings, J. van Pelt, 1994-10-11 This book concentrates on the organizational level of neurons and neuronal networks under the unifying theme The Self Organizing Brain From Growth Cones to Functional Networks Such a theme is attractive because it incorporates all phases in the emergence of complexity and adaptive organization as well as involving processes that remain operative in the mature state The order of the sections follows successive levels of organization from neuronal growth cones neurite formation neuronal morphology and signal processing to network development network dynamics and finally to the formation of functional circuits

Nucleotides and their Receptors in the Nervous System P. Illes, H. Zimmermann, 1999-08-31 The study of purinergic mechanisms has for long been focused on the actions of the nucleoside adenosine whereby the contribution of nucleotides to the signaling systems has been underestimated Based on the proceedings of a IUPHAR Satellite Conference held in Leipzig Germany this book offers a comprehensive update and overview of nucleotide release the structure and function of nucleotide receptors nucleotide metabolizing ecto enzymes as well as the physiological functions of nucleotides in the nervous system The physiology and molecular biology of receptors for ATP and other nucleotides are examined as are the physiology and molecular biology of enzymes that hydrolyze extracellular nucleotides At present a pharmacology of the nucleotide signaling system is being developed Of particular interest is the production of receptor subtype specific antagonists and of drugs that selectively affect the extracellular lifetime of the nucleotide An excellent source of reference for institutes of pharmacology biochemistry neurology zoology and physiology and for the pharmaceutical industry

The Biological Basis for Mind Body Interactions E.A. Mayer, C.B. Saper, 2000-02-03 The current volume focuses on several key aspects of mind brain body interactions in health and disease including specific examples of interactions between body and brain mechanisms underlying the response of the system to stressors the role of early life events in permanently biasing the responsiveness of the system and practical implications of mind body interactions in human disease

The volume on Biological Basis for Mind Body Interactions is organized into 6 major sections each dealing with a unique aspect of the general topic After establishing the relationship between mind brain and emotions the first section deals with general neurobiological aspects mediating the effect of stress on various organ systems including the immune and cardiovascular system The second section covers the topic of how early life stressor can permanently alter responsiveness of the nervous system in animals and in man The third section deals with influences of the internal environment mediated by neuroendocrine and visceral afferent pathways on the CNS The fourth section which deals with influences of body on the brain focuses on mechanisms involved in perception and modulation of pain The fifth section deals with influences of the mind brain on the body with an emphasis on central and peripheral mechanisms of autonomic control of body functions The last section deals with a series of practical issues of mind body treatments including acupuncture breathing body work and meditation In addition issues such as cost effectiveness and research aspects are discussed Authors in this last section frequently refer to topics and mechanisms addressed in the early sections making it a truly integrated volume The unique aspect of the volume is the integration of state of the art research information on biological and practical aspects of mind brain body interactions It is based on the beliefs of the editors and participants that the traditional separation of mind and body in research and in treatment of human disease is obsolete and needs to be replaced with a new unifying paradigm Ironically this evolving paradigm shares many similarities with ancient pre Cartesian paradigms of health and disease

Neuronal Degeneration and Regeneration: From Basic Mechanisms to Prospects for Therapy F.W. Van Leeuwen,A. Salehi,R.J. Giger,A.J.G.D. Holtmaat,J. Verhaagen,1998-11-09 This book is the result of the 20th International Summer School in Brain Research organized in August 1997 in Amsterdam by the Netherlands Institute for Brain Research at the Royal Netherlands Academy of Sciences It is the first book that provides a complete overview of the field of neurodegeneration and regeneration including spinal cord injury neurodegenerative diseases and therapy Divided into five sections the first two sections give an overview of fundamental research on nerve cell death neuronal survival neurite outgrowth and guidance Extensive attention is given to the role of neurotrophins their receptor tyrosine kinases and cell adhesion molecules in development and regeneration of the nervous system The third section of the book is devoted to research involving human neurodegenerative diseases and emerging treatment strategies Section four focusses on recent advances in the understanding of pathophysiological mechanisms underlying neurodegenerative diseases including Alzheimer s Parkinson s and Huntington s diseases along with prion diseases Novel insights into the neuropathological hallmarks of these diseases as well as into transgenic animal models the involvement of environmental factors and genomic and mRNA changes that can cause neurodegeneration The final section of this volume reveals recent developments in the use of cell and gene therapy to treat neurodegenerative disease and lesion related deficits Implantation of genetically modified cells direct gene transfer with viral vectors and the first clinical trials with encapsulated genetically modified cells

in patients suffering from amyotrophic lateral sclerosis are examples of new therapeutic strategies treating neurodegenerative diseases The book is of particular interest to departments of neuroscience neurological clinics and departments the pharmacological industry and medical libraries

Advances in Brain Vasopressin I.J.A. Urban, J.P.H. Burbach, D. De Wied, 1999-02-16 Advances in Brain Vasopressin elucidates the functions of the regulatory peptide vasopressin in the nervous system and reviews the current status of this field at different levels It deals with the cell biology and anatomy of the neurons that produce vasopressin in the brain and provides an overview on the receptors of vasopressin and the signal transduction pathways that they activate including the cellular responses that are triggered by vasopressin Reviews are presented on the modulation of behavior induced by vasopressin in a number of different contexts such as sex linked and steroid dependent behaviors social behaviors and learning and memory Furthermore the volume deals with several controversial issues in the field by presenting overlapping chapters from different research groups in order to provide the reader with current views Highly relevant and useful for those working on this first neuropeptide and for young investigators entering the field and in addition shows how important a multidisciplinary approach is to unravelling the function of a neuropeptide in the brain

Biological Function of Gangliosides L. Svennerholm, 1994-02 This book focuses on the role of gangliosides in three areas of medicine in which rapid progress has been made in the last decade cancer peripheral neuropathies and Alzheimer's disease The volume further reflects progress in the pathogenesis of peripheral neuropathies and the controversial role of gangliosides also in therapeutic administration There is a section on the role of gangliosides in neuronal differentiation and development and their receptor functions and cell surface activities This excellent addition to the renowned Progress in Brain Research series also contains an invaluable plenary lecture on molecular basis of cell adhesion by Nobel prizewinner Gerald Edelman

Peripheral and Spinal Mechanisms in the Neural Control of Movement M.D. Binder, 1999-12-17 In the last decade we have witnessed a striking maturation of our understanding of how neurons in the spinal cord control muscular activity and movement Paradoxically a host of new findings have revealed an unexpected versatility in the behavior of these well studied neural elements and circuits In this volume the world's leading experts review the current state of our knowledge of motor control outline their latest results and developments and delineate the seminal unresolved questions in this vibrant field of research The volume begins with a commentary and overview of our current understanding of the peripheral and spinal basis of motor control The remainder of the volume is divided into seven sections each focused on a different problem The first chapter in each section provides some historical review and presages the experimental findings and hypotheses that are discussed in subsequent chapters Topics include the biomechanics of neuromuscular systems the properties of motoneurons and the muscle units they control spinal interneurons pattern generating circuits locomotion descending control of spinal circuits comparative physiology of motor systems and motor systems neurophysiology studied in man The book serves as a unique reference volume and should be

essential reading for anyone interested in motor systems Moreover the volume s comprehensive coverage of a wide range of topics make it an effective textbook for graduate level courses in motor control neurobiology kinesiology physical therapy and rehabilitation medicine

Gene Expression in the Central Nervous System Albert C. H. Yu,1995 Gene expression is an active ongoing process that maintains a functional CNS as proteins are being made on a continual basis Processes such as learning and memory nerve cell repair and regeneration and its response to stress are critically dependent on gene expression This volume highlights the role of gene expression in normal CNS function and presents many research methods at the cutting edge of neuroscience which will provide insight into therapeutic approaches through which the control of gene expression may be used in the treatment of many nervous system diseases

Neuropeptides in the Spinal Cord F. Nyberg,Z. Wiesenfeld-Hallin,H.S. Sharma,1995-10-30 This is the first book devoted exclusively to examining the role of neuropeptides in the spinal cord Great progress has been made recently in our understanding of the role of neuropeptides in neurotransmission New tools have been developed to help study the function of endogenous neuropeptides in health and disease Because the general organization of the spinal cord is well conserved among species and neuropeptides appear to have a major role in spinal neurotransmission this book is a timely compendium of recent research in this field The volume will help to stimulate further research in the field of neuropeptides which will lead to better understanding of this role in health and disease

Disorders of Brain, Behavior, and Cognition: The Neurocomputational Perspective J.A. Reggia,E. Ruppin,D.L. Hypothalamic Integration of Circadian Rhythms R.M. Buijs,A. Kalsbeek,H.J. Romijn,M. Mirmiran,C.M.A. Pennartz,1996-12-03 The International Summer School of Brain Research on which

this book is based was organized by the Netherlands Institute for Brain research NIBR which has a rich history dating back to the beginning of the century The focus of interest in this present volume of Progress in Brain Research are the few thousand neurons at the base of the hypothalamus that form the biological clock Attention is focused on the mechanisms underlying the generation of circadian rhythmicity within our biological clock which is still far from understood Contributions originating from many disciplines give updates on the latest theories on the molecular and electrophysiological basis of the pacemaker mechanism and the various approaches used in different species Attention is also paid to the way the signal of the biological clock is transferred to the rest of the central nervous system New data on the role of the suprachiasmatic nucleus and its impact on the functioning of the human being is presented Altogether an excellent volume which will further the understanding of this elusive material

Pharmacological Sciences: Perspectives for Research and Therapy in the Late 1990s A. Claudio Cuello, Brian Collier, 2012-12-06 This volume arose from the scientific program of the XIIth International Congress of Pharmacology held in Montreal Canada July 24 29 1994 The scientific program included plenary lectures and symposia in addition to poster presentations and colloquia The abstracts of the Congress presentations were published as supplement 1 of volume 72 by the Canadian Journal of Physiology Dr Brian Collier was chair of the scientific program committee and thus also collaborated on this work The objective that we pursued was to produce a volume of reasonable size which would feature all of the plenary lectures and symposia from those authors who agreed to participate To this end we solicited mini reviews from plenary lecturers and asked symposia organizers to coordinate a single short review covering the individual topics within their event Those who accepted this challenge are evident in this volume We express our gratitude to these authors for doing so and for exercising considerable ingenuity in completing their task within a reasonable time
