Stough, 2009-07-28 This book examines emerging hypotheses new methods and theoretic developments in regional economic development It offers a diverse set of case studies ranging from a focus on Europe Central and East Asia and North America

New Directions in Regional Economic Development Sameeksha Desai, Peter Nijkamp, Roger R. Stough, 2011 The introduction of endogenous growth theory has led to new interest in the role of the entrepreneur as an agent driving technical change at the local regional level This book examines theoretical and methodological issues surrounding the interface of the entrepreneur in regional growth dynamics on the one hand and on the other presents illuminating case studies In total the book s contributions amplify understanding of such critical issues as the relationship between innovation and entrepreneurship the entrepreneur s role in transforming knowledge into something economically useful and knowledge commercialization with both conceptual and empirical contributions The emergence of endogenous growth theory has unleashed a flurry of new hypotheses and related inquiries that have in turn created an exciting dynamic in the conceptual theoretical and empirical foundations of the field A central feature has been the recognition that local initiatives matter in how regions grow and adjust to changes and shocks Moreover it is the role of technical change driven by entrepreneurs that motivates these initiatives This volume begins by outlining and explaining the theory and method behind entrepreneurship and development This is followed by specific case studies of practice and policy These cases are region specific offering the reader concrete empirically based research results Scholars and students in economics entrepreneurship and public policy will find this volume a valuable tool in understanding the latest research in regional economic development **Advances in**

Spatial Econometrics Luc Anselin, Raymond Florax, Sergio J. Rey, 2013-03-09 The volume on New Directions in Spatial Econometrics appeared in 1995 as one of the first in the then new Springer series on Advances in Spatial Sciences It very quickly became evident that the book satisfied a pent up demand for a collection of advanced papers dealing with the methodology and application of spatial econometrics This emerging subfield of applied econometrics focuses on the incorporation of location and spatial interaction in the specification estimation and diagnostic testing of regression models The current effort is a follow up to the New Directions volume Even though the number of empirical and theoretical journal articles dealing with various aspects of spatial econometrics has grown tremendously in the recent past the need remained to bring together an advanced collection on methodology tools and applications This volume contains several papers that were presented at special sessions on spatial econometrics organized as part of a number of conferences of the Regional Science Association International In addition a few papers were invited for submission All papers were refereed The focus in the volume reflects the advances made in the field in recent years **Geography, Institutions and Regional Economic**

Performance Riccardo Crescenzi, Marco Percoco, 2012-12-13 The book aims to present traditional features of regional

science as geographical concepts and institutions as well as relatively new topics such as innovation and agglomeration economies. In particular, it demonstrates that contrary to what has been argued by recent economics literature, both geography and institutions or culture are relevant for local development. In fact, these phenomena along with the movement of goods and workers are among the main reasons for persisting development differentials. These intriguing relationships are at the heart of the analysis presented in this book and form the conceptual basis for a promising institutional approach to economic geography.

The Dynamics of the Innovation Divide between China and Europe Arkadiusz Michal Kowalski, 2022-03-13. This book examines the problem of the innovation divide in the world economy and convergence in innovation performance between leaders and followers analysed through the prism of Chinese experiences and explored from an European Union (EU) perspective. The rationale for research conducted in this book is an observation of a significant change in the geography of world innovation reflected in the emergence of innovation hubs in developing countries and in the shift of manufacturing activity including high and medium high technology industries to emerging economies, mainly China. The book analyses the factors of Chinese innovation success in recent decades such as China's science technology and innovation policy, increased R D expenditures, human capital development and the development of clusters and highly specialized industries. It also focuses on the challenges for developed European economies which are being at risk of losing their knowledge related sources of competitive advantage. It also offers recommendations for future policy actions. The book's analysis goes beyond a cross country comparison taking into account a regional perspective. The reason for this regional dimension is the increasingly recognized importance of proximity in stimulating innovation processes and an observed strong geographical polarization of innovation activity at specific regions seen in the emergence of clusters, particularly visible in China. The monograph will provide an up to date reference for academics and students across a variety of disciplines. It will be of particular interest to researchers in the area of innovation and practitioners doing business in China as well as policymakers at international, national and regional levels involved in designing and implementing innovation policy.

Great Minds in Regional Science, Vol. 3 Peter Batey, David Plane, 2025-07-31. This book is the third volume in a series on Great Minds in Regional Science which seeks to present a contemporary view on the scientific relevance of the work done by great thinkers in regional science. This volume presents among others Walter Christaller, Benjamin H. Stevens, William Alonso and François Perroux. Each chapter combines factual biographical information about the Great Mind, a description of their major contributions and a discussion of the broader context of their work as well as an assessment of its current relevance, scientific recognition and policy impact. The book attempts to fill a gap in our knowledge and to respond to the growing interest in the formation and development of the field of regional science and its key influential figures.

European Regional Growth Bernard Fingleton, 2013-06-29. Looking into the future and trying to visualize long run regional disparities is difficult. There is no agreed single theory to guide our model building although some insight can be

gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism. This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic. Many of the chapters in the book employ the methods of spatial econometrics. Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio-economic theories and which can be represented most informatively in mapped form. These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science, spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development. In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries.

The City and Its Sciences Cristoforo S. Bertuglia, Giuliano. Bianchi, Alfredo Mela, 2012-12-06 Recent developments in the field of urban analysis and management are investigated in this book. It is a wide ranging collection of essays on the subject drawn from a long term project and seminar held in Italy to review the state of the art and speculate on the future influence on the sciences of the city of the complexity concept. Of particular interest is the variety of points of view often contrasting and the attempt to go beyond the conventional approaches to the analysis and the planning of the city. While focussing mainly on the European and in particular Italian context the discussion is of general relevance and valuable to anyone concerned with the prospects for the city in the new millennium.

Regional Convergence in the European Union Juan R. Cuadrado-Roura, Marti Parellada, 2013-03-14 The introduction of the single currency in the European economic space constitutes without doubt the most visible step towards monetary and economic integration in the EU. Those who boosted the birth of the Common Market in 1957 dreamt that this would one day come about as a logical consequence of the integration process. However things have gone much more slowly than possibly imagined although if taken in an adequate historic perspective it is undeniable that the agreements that have led to European Monetary Union signify a really formidable jump in the process of political and economic integration in Europe. This is something many doubted would ever happen but which is already a reality although still in need of a period of consolidation. The most general economic consequences of the EMU have already been analysed in considerable depth. Proof of this is the literature already available. In general there is coincidence in affirming that the balance of the results expected is clearly positive. Firstly as a result of the anticipated gains in efficiency a consequence of reduction of transaction costs associated to the previous existence of different currencies and of the elimination of exchange rate uncertainties.

Regional Competition Peter W.J. Batey, Peter Friedrich, 2013-03-14 Many parts of the world are currently experiencing the outcome of processes of economic integration, globalization and transformation. Technological

advances in telecommunications and in transport facilities have opened up new possibilities for contracts and exchanges among regions External effects among regions have increased in importance As a result competition among regions has intensified Except some pioneering work by regional scientists and scholars of public finance and economics the phenomenon of regional competition has yet to attract the attention it warrants despite its importance for policy making The present volume is intended to remedy this neglect by providing high level contributions to the three main topics of the book the theory of regional competition methods of analysis of regional competition and policies of regional competition

The Emergence of the Knowledge Economy Zoltan J. Acs,Henri L.F. de Groot,Peter Nijkamp,2013-03-20 Knowledge has in recent years become a key driver for growth of regions and nations This volume empirically investigates the emergence of the knowledge economy in the late 20th century from a regional point of view It first deals with the theoretical background for understanding the knowledge economy with knowledge spillovers and development externalities It then examines aspects of the relationship between knowledge inputs and innovative outputs in the information computer and telecommunications sector ICT of the economy at the regional level Case studies focusing on a wide variety of sectors countries and regions finally illustrate important regional innovation issues

China's Spatial Economic Development Andrew M. Marton,2013-12-16 The spatial patterns of China's rapid economic transformation fundamentally challenge conventional geographies of urban and regional development This book provides a theoretically informed case study of the local character of regional change in China's lower Yangzi Delta as well as a new analytical framework for understanding China's unique form of economic modernization

Transport Developments and Innovations in an Evolving World Michel Beuthe,Veli Himanen,Aura Reggiani,Luca Zamparini,2013-06-05 Our world is continuously changing as new technologies are developed demographic patterns evolve and new social and political configurations emerge However most people would agree that not unlike the time of the Industrial Revolution the rate of change has accelerated over the last few decades It is certainly the case of many economic activities where the trend towards globalization supported by a faster diffusion of knowledge and information economies of scale the opening of borders and improved transport networks has induced a spatial redistribution of production and ownership Until recently the concomitant economic growth eased the way towards the necessary reorganization but at the same time created additional environmental and transport problems This phenomenon is pervasive

all around the globe but it particularly affects the European continent which is still fragmented by administrative cultural and linguistic differences national boundaries and rivalries In this context the slow but persistent drive towards market integration and deregulation makes Europe an extraordinary laboratory for politicians economic researchers and especially for transport analysts

The Wiley-Blackwell Companion to Economic Geography Trevor J. Regional Economic Policy in Europe Ulrike Stierle-von Schütz, 2008 Regional Economic Policy in Europe presents a tightly focused selection of policy empirical and theoretical perspectives on contemporary dimensions of regional economic policy in the EU It concentrates on three areas the dissimilarities and resulting convergence of disparate regions within the EU the localisation of economic activities and how regions can understand and manage them and finally the experiences and lessons that can be drawn from European regional policy While exploring EU cohesion and regional development more widely the book also examines Spanish Belgian and Eastern European experiences on growth human capital foreign investment and technological spillovers This up to date and thoroughly researched study is one that will be appreciated by academics and researchers of European studies and regional economics in Europe Policymakers will also find the conclusions reached within the pages of this book invaluable

Stochastic Processes for Spatial Econometrics Jorge Mateu Mahiques, Mateu Mahiques Jorge, Albert Ortiz José Miguel, Carles Comas Rodríguez, 2010 This monograph presents a general methodology which is shown to be valid in the analysis of spatial point structures and that is certainly easier to use by non expert researchers coming from other applied sciences than other much modern techniques We suggest that the local conditioning approach has the advantage that it is statistically efficient easy to correct for edge effects and provides similar results than other more complicated likelihood based methods We show a mathematical justification to prove that any purely inhibitory pairwise interaction point process pipp can be obtained as the limit of a sequence of auto Poisson lattice schemes and within this context we develop the pseudolikelihood estimating equations We particularly focus on developing a Monte Carlo simulation study to analyze the behaviour of the parameter s of a particular pipp model derived using this technique We also stress that this methodology has a wide range of applications in

many fields particularly in economy and demography

Handbook of Research on Innovation and Clusters Charlie Karlsson, 2008 This volume is an important step in furthering the discussion about how cluster strategies work and the implications for theory and policy Jennifer Clark Review of Regional Studies The role of innovations and clusters has increasingly dominated local and regional development policies in recent decades This authoritative and accessible Handbook considers important aspects of high tech clusters analyses insightful cluster case studies and provides a number of recommendations for cluster policies The chapters in this Handbook are written by international experts in the field and present evidence of the scope effects and potential of clusters as concentrations of innovative activities The authors emphasize that cluster development is not the only option for local and regional development and argue that for cluster policies to be worthwhile supporting policies in fields such as education R D transportation and communication infrastructure must accompany most cluster policies Furthermore several contributions stress that clusters often develop along a life cycle that may end with decline and even the disappearance of clusters Consequently this Handbook provides the basis for improving both research on innovation and clusters and the formulation and implementation of cluster policies Furnishing the reader with rich comprehensive discussion of innovations and clusters this Handbook will be an essential source for researchers and academics in the field as well as policymakers planners and specialists development experts and agencies and consultants

Progress in Spatial Analysis Antonio Páez, Julie Gallo, Ron N. Buliung, Sandy Dall'Erba, 2009-10-30 Space is increasingly recognized as a legitimate factor that influences many processes and conceptual frameworks including notions of spatial coherence and spatial heterogeneity that have been demonstrated to provide substance to both theory and explanation The potential and relevance of spatial analysis is increasingly understood by an expanding sphere of cogent disciplines that have adopted the tools of spatial analysis This book brings together major new developments in spatial analysis techniques including spatial statistics econometrics and spatial visualization and applications to fields such as regional studies transportation and land use political and economic geography population and health Establishing connections to existing and emerging lines of research the book also serves as a survey of the field of spatial analysis and its links with related areas
