

FIGURE 14

5. Remove bolts A, Figure 15, in the lower clamps. Slide the lower clamps down on the notched shafts and move the outer clamps, C, up against the shaft at B. Then slide the lower clamps up against the inner-center clamps and install bolts A, in the second set of notches. Each notch in the shaft will change the frame height approximately 1" (25 mm).
6. Replace the frame height and, if the height is correct, tighten the bolts in the lower clamp A, Figure 15. Set the lower clamps in clamping notches.
7. Lock the mower frame at A, Figure 5, by lengthening or shortening the upper link.

LOCATION OF MOWER INNER SHOE

The outside of the right tractor wheel should clear the inner shoe by 2" (51 mm) (10 mm).

The inner shoe should be set in the left position when the distance from the center line of the tractor to the outside of the right tire is 37" (94 cm) or less. Use the center position, Figure 16, when the distance is 37"-41" (94 cm-105 cm). Set the inner shoe in the right position if the distance is 42"-48" (107 cm-122 cm).

To change the position of the mower inner shoe when it is mounted on a tractor, put the tractor in the forward position and raise the mower at high suspension. Lift up on the outer bar assembly and disconnect the lift spring at A, Figure 16. Release the outer-bar clamps and lower the mower to the ground.

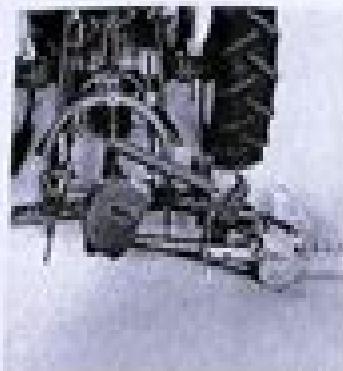

FIGURE 15

Disconnect the lift cable and remove the bolts and straps at B and C, Figure 16. Move the cross frame member to position the inner shoe at the desired location. Replace the bolts with the bolt heads down. Use the spacers at the bolt heads if the crossmember notch is not being used.

Right Position

Install the lift cable eye in the extreme left hole, B, Figure 16, of the lift cable extension strap. Install the lift spring in the extreme right hole, C, of the lift spring extension strap.

Center Position

Install the cable eye as shown in Figure 16. Install the lift spring in the center hole of the lift spring extension strap as shown.

Left Position

Install the lift cable eye directly to the cable adjustment straps, F, Figure 16. (The cable extension straps are not needed for this position.) Install the lift spring in the left hole of the spring extension strap.

IMPORTANT: Some tractor PTO shafts are offset to the left of the tractor center line. Use the mower center or left position if the offset in the PTO shaft is more than 7½" (19 cm).

Reattach the lift spring, lift cable, and gag linkage whenever the position of the inner shoe is changed. The lift cable extension strap, Figure 16, must be used when the center or right positions are used. Refer to the "Lift Spring - 451 and 452", "Lift Cable - 451", and "Gag Linkage" portions of this manual for more information.

LUBRICATION

Do not lubricate the PTO shafts. Every 100 hours of operation, or at 100 days including the 1000-hour interval, check the bearings in the upper drive housing at least once a year and adjust as required.

Wipe oil from the grease fittings before greasing the grease gun.

Lubricate all grease fittings with a good grade of grease after every eight hours of use.

WHEEL BEARINGS (Model 450)

Disassemble and repack the wheel bearings with a good grade of wheel bearing grease each season or every 400 hours of use.
