This book is a collection of select papers presented at the Tenth Structural Engineering Convention 2016 SEC 2016. It comprises plenary, invited, and contributory papers covering numerous applications from a wide spectrum of areas related to structural engineering. It presents contributions by academics, researchers, and practicing structural engineers addressing analysis and design of concrete and steel structures, computational structural mechanics, new building materials for sustainable construction, mitigation of structures against natural hazards, structural health monitoring, wind and earthquake engineering, vibration control, and smart structures, condition assessment, and performance evaluation, repair, rehabilitation, and retrofit of structures. Also covering advances in construction techniques, practices, behavior of structures under blast impact loading, fatigue, and fracture, composite materials, and structures for non-conventional energy, wind, and solar, it will serve as a valuable resource for researchers, students, and practicing engineers alike.

Prototyping Reinhard Budde, Karlheinz Kautz, Karin Kühlenkamp, Heinz Züllighoven, 2012-12-06

Prototyping is an approach used in evolutionary system development. In this book, the authors show which forms of prototyping can be employed to tackle which problems. They take a look at the tools used in everyday software development with a view to determining their suitability for prototyping and attempt to elucidate prototyping as a methodological concept. Part I of the book looks at prototyping as an approach for constructing and evaluating models. Traditional approaches and phase-oriented life cycle plans are discussed. Prototyping overcomes fundamental problems associated with life cycle plans. The authors

present their own concept of evolutionary system development Part II shows to what extent technical support of evolutionary system development is possible Various tools for supporting prototyping are discussed and prospective trends are indicated Criteria are listed to help the reader choose between the various development environments currently available or likely to become available in the near future Case studies are used to illustrate how prototype construction can be integrated in software projects

Matthews,2019-07-23 *Diagnosis of Plant Virus Diseases* presents a comprehensive summary of methods currently available for the diagnosis of plant diseases caused by viruses and viroids Up to date literature references are provided brief accounts of the basis for particular methods are included and detailed protocols are presented Procedures discussed include the use of host plants electron microscopy of in vitro preparations serological procedures especially forms of ELISA monoclonal antibodies serological specific electron microscopy and immunoblotting and nucleic acid hybridization procedures Strategies are outlined for implicating virus like pathogens as causes of diseases of unknown etiology and problems involved in identifying complexes of transmission dependent and helper viruses are discussed The book will be extremely useful for phytopathologists plant virologists and research students and workers in plant virology laboratories and diagnostic plant pathology laboratories

Problem Solving S. Ian Robertson,2003-09-02 Problem solving is an integral part of everyday life yet few books are dedicated to this important aspect of human cognition In each case the problem such as solving a crossword or writing an essay has a goal In this comprehensive and timely textbook the author discusses the psychological processes underlying such goal directed problem solving and examines both how we learn from experience of problem solving and how our learning transfers or often fails to transfer from one situation to another Following initial coverage of the methods we use to solve unfamiliar problems the book goes on to examine the psychological processes involved in novice problem solving before progressing to the methods and processes used by skilled problem solvers or experts Topics covered include how we generate a useful representation of a problem as a starting point general problem solving strategies we use in unfamiliar situations possible processes involved in insight or lateral thinking the nature of problem similarity and the role of analogies in problem solving understanding and learning from textbooks and how we develop expertise through the learning of specific problem solving skills Clear up to date and accessible Problem Solving will be of interest to undergraduates and postgraduates in cognitive psychology cognitive science and educational psychology The focus on the practical transfer of learning through problem solving will also make it of relevance to educationalists and business psychologists

Fundamentals and Standards in Hardware Description Languages Jean Mermet,2012-12-06 The second half of this century will remain as the era of proliferation of electronic computers They did exist before but they were mechanical During next century they may perform other mutations to become optical or molecular or even biological Actually all these aspects are only fancy dresses put on mathematical machines This was always recognized to be true in the domain

of software where machine or high level languages are more or less rigorous but immaterial variations of the universally accepted mathematical language aimed at specifying elementary operations functions algorithms and processes But even a mathematical machine needs a physical support and this is what hardware is all about The invention of hardware description languages HDL s in the early 60 s was an attempt to stay longer at an abstract level in the design process and to push the stage of physical implementation up to the moment when no more technology independent decisions can be taken It was also an answer to the continuous exponential growth of complexity of systems to be designed This problem is common to hardware and software and may explain why the syntax of hardware description languages has followed with a reasonable delay of ten years the evolution of the programming languages at the end of the 60 s they were Algol like a decade later Pascal like and now they are C or ADA like They have also integrated the new concepts of advanced software specification languages
