New Directions in Question Answering Mark T. Maybury, 2004 Major trends in the development of an important new method of information access that combines elements of natural language processing information retrieval and human computer interaction Question answering systems which provide natural language responses to natural language queries are the subject of rapidly advancing research encompassing both academic study and commercial applications the most well known of which is the search engine Ask Jeeves Question answering draws on different fields and technologies including natural language processing information retrieval explanation generation and human computer interaction Question answering creates an important new method of information access and can be seen as the natural step beyond such standard Web search methods as keyword query and document retrieval This collection charts significant new directions in the field including temporal spatial definitional biographical multimedia and multilingual question answering After an introduction that defines essential terminology and provides a roadmap to future trends the book covers key areas of research and development These include current methods architecture requirements and the history of question answering on the Web the development of systems to address new types of questions interactivity which is often required for clarification of questions or answers reuse of answers advanced methods and knowledge representation and reasoning used to support question answering Each section contains an introduction that summarizes the chapters included and places them in context relating them to the other chapters in the book as well as to the existing literature in the field and assessing the problems and challenges that remain

New Directions for Intelligent Tutoring Systems Ernesto Costa, 2012-12-06 This book is a result of the NATO Advanced Research Workshop on New Directions for Intelligent Tutoring Systems held in Sintra Portugal October 6 10 1990 The main idea behind the workshop was to bring together scientists with different concerns about Intelligent Tutoring Systems ITS in order to discuss the positive and negative aspects of the current architecture paradigm expert module student module instructional module and interface module and eventually propose some modifications or radical changes to it This was a consequence of the increasing malaise felt currently by researchers in the area of artificial intelligence and education and in particular by those concerned with ITS One symptom of this state of affairs is the fact that people have started talking about Intelligent Learning Environments ILE instead of ITS To understand the reasons for this situation we promoted the discussion of questions like To what extent do we need the technology of expert systems in ITS Which other relevant AI techniques and methodologies are urgently needed Is ITS a tool for knowledge communication or is it rather a belief system How can the research already done on interactions among agents be utilized Is it possible to find a formal theory to describe and solve the current problems with ITS The book contains the revised versions of the papers presented at the workshop The new texts reflect the discussions that took place at the meeting

Boden,2006 Cognitive science is among the most fascinating intellectual achievements of the modern era The quest to understand the mind is an ancient one But modern science has offered new insights and techniques that have revolutionized this enquiry Oxford University Press now presents a masterly history of the field told by one of its most eminent practitioners

Psychology is the thematic heart of cognitive science which aims to understand human and animal minds. But its core theoretical ideas are drawn from cybernetics and artificial intelligence and many cognitive scientists try to build functioning models of how the mind works. In that sense Margaret Boden suggests its key insight is that mind is a very special machine. Because the mind has many different aspects the field is highly interdisciplinary. It integrates psychology not only with cybernetics AI but also with neuroscience and clinical neurology with the philosophy of mind language and logic with linguistic work on grammar semantics and communication with anthropological studies of cultures and with biological and A Life research on animal behaviour evolution and life itself. Each of these disciplines in its own way asks what the mind is what it does how it works how it develops and how it is even possible. Boden traces the key questions back to Descartes's revolutionary writings and to the ideas of his followers and his radical critics through the eighteenth and nineteenth centuries. Her story shows how controversies in the development of experimental physiology neurophysiology psychology evolutionary biology embryology and logic are still relevant today. Then she guides the reader through the complex interlinked paths along which the study of mind developed in the twentieth century. Cognitive science covers all mental phenomena not just cognition knowledge but also emotion personality psychopathology social communication religion motor action and consciousness. In each area Boden introduces the key ideas and researchers and discusses those philosophical critics who see cognitive science as fundamentally misguided. And she sketches the waves of resistance and acceptance on the part of the media and general public showing how these have affected the development of the field. No one else could tell this story as Boden can she has been a member of the cognitive science community since the late 1950s and has known many of its key figures personally. Her narrative is written in a lively swift moving style enriched by the personal touch of someone who knows the story at first hand. Her history looks forward as well as back besides asking how state of the art research compares with the hopes of the early pioneers she identifies the most promising current work. Mind as Machine will be a rich resource for anyone working on the mind in any academic discipline who wants to know how our understanding of mental capacities has advanced over the years.

Human Language Technology. Challenges for Computer Science and Linguistics
 Zygmunt Vetulani, 2011-03-22 This book constitutes the refereed proceedings of the 4th Language and Technology Conference Challenges for Computer Science and Linguistics LTC 2009 held in Poznan Poland in November 2009. The 52 revised and in many cases substantially extended papers presented in this volume were carefully reviewed and selected from 103 submissions. The contributions are organized in topical sections on speech processing computational morphology lexicography parsing computational semantics dialogue modeling and processing digital language resources WordNet document processing information processing and machine translation.

Technologies for Constructing Intelligent Systems 1 Bernadette Bouchon-Meunier, Julio Gutierrez-Rios, Luis Magdalena, Ronald R. Yager, 2013-03-20 Intelligent systems enhance the capacities made available by the internet and other computer based technologies. This book deals with

the theory behind the solutions to difficult problems in the construction of intelligent systems Particular attention is paid to situations in which the available information and data may be imprecise uncertain incomplete or of linguistic nature Various methodologies for these cases are discussed among which are probabilistic possibilistic fuzzy logical evidential and network based frameworks One purpose of the book is to consider how these methods can be used cooperatively Topics included in the book include fundamental issues in uncertainty the rapidly emerging discipline of information aggregation neural networks bayesian networks and other network methods as well as logic based systems

Secure Data Science Bhavani Thuraisingham, Murat Kantarcioglu, Latifur Khan, 2022-04-27 Secure data science which integrates cyber security and data science is becoming one of the critical areas in both cyber security and data science This is because the novel data science techniques being developed have applications in solving such cyber security problems as intrusion detection malware analysis and insider threat detection However the data science techniques being applied not only for cyber security but also for every application area including healthcare finance manufacturing and marketing could be attacked by malware Furthermore due to the power of data science it is now possible to infer highly private and sensitive information from public data which could result in the violation of individual privacy This is the first such book that provides a comprehensive overview of integrating both cyber security and data science and discusses both theory and practice in secure data science After an overview of security and privacy for big data services as well as cloud computing this book describes applications of data science for cyber security applications It also discusses such applications of data science as malware analysis and insider threat detection Then this book addresses trends in adversarial machine learning and provides solutions to the attacks on the data science techniques In particular it discusses some emerging trends in carrying out trustworthy analytics so that the analytics techniques can be secured against malicious attacks Then it focuses on the privacy threats due to the collection of massive amounts of data and potential solutions Following a discussion on the integration of services computing including cloud based services for secure data science it looks at applications of secure data science to information sharing and social media This book is a useful resource for researchers software developers educators and managers who want to understand both the high level concepts and the technical details on the design and implementation of secure data science based systems It can also be used as a reference book for a graduate course in secure data science Furthermore this book provides numerous references that would be helpful for the reader to get more details about secure data science

Annotating, Extracting and Reasoning about Time and Events Frank Schilder, Graham Katz, James Pustejovsky, 2007-10-06 This state of the art survey comprises a selection of the material presented at the International Dagstuhl Seminar on Annotating Extracting and Reasoning about Time and Events held in Dagstuhl Castle Germany in April

2005 The seminar centered around an emerging de facto standard for time and event annotation TimeML It features nine papers that detail current research and discuss open problems concerning annotation temporal reasoning and event identification

Next Generation Search Engines: Advanced Models for Information Retrieval Jouis, Christophe, Biskri, Ismail, Ganascia, Jean-Gabriel, Roux, Magali, 2012-03-31 Recent technological progress in computer science Web technologies and the constantly evolving information available on the Internet has drastically changed the landscape of search and access to information Current search engines employ advanced techniques involving machine learning social networks and semantic analysis Next Generation Search Engines Advanced Models for Information Retrieval is intended for scientists and decision makers who wish to gain working knowledge about search in order to evaluate available solutions and to dialogue with software and data providers The book aims to provide readers with a better idea of the new trends in applied research

Clinical Text Mining Hercules Dalanis, 2018-05-14 This open access book describes the results of natural language processing and machine learning methods applied to clinical text from electronic patient records It is divided into twelve chapters Chapters 1 4 discuss the history and background of the original paper based patient records their purpose and how they are written and structured These initial chapters do not require any technical or medical background knowledge The remaining eight chapters are more technical in nature and describe various medical classifications and terminologies such as ICD diagnosis codes SNOMED CT MeSH UMLS and ATC Chapters 5 10 cover basic tools for natural language processing and information retrieval and how to apply them to clinical text The difference between rule based and machine learning based methods as well as between supervised and unsupervised machine learning methods are also explained Next ethical concerns regarding the use of sensitive patient records for research purposes are discussed including methods for de identifying electronic patient records and safely storing patient records The book's closing chapters present a number of applications in clinical text mining and summarise the lessons learned from the previous chapters The book provides a comprehensive overview of technical issues arising in clinical text mining and offers a valuable guide for advanced students in health informatics computational linguistics and information retrieval and for researchers entering these fields

The Language of Time: A Reader Inderjeet Mani, James Pustejovsky, Robert Gaizauskas, 2005-05-27 This reader collects and introduces important work in linguistics computer science artificial intelligence and computational linguistics on the use of linguistic devices in natural languages to situate events in time whether they are past present or future whether they are real or hypothetical when an event might have occurred and how long it could have lasted In focussing on the treatment and retrieval of time based information it seeks to lay the foundation for temporally aware natural language computer processing systems for example those that process documents on the worldwide web to answer questions or produce summaries The development of such systems requires the application of technical knowledge from many different disciplines The book is the first to bring these disciplines together by means of classic and contemporary papers in four areas tense aspect and event

structure temporal reasoning the temporal structure of natural language discourse and temporal annotation Clear self contained editorial introductions to each area provide the necessary technical background for the non specialist explaining the underlying connections across disciplines A wide range of students and professionals in academia and industry will value this book as an introduction and guide to a new and vital technology The former include researchers students and teachers of natural language processing linguistics artificial intelligence computational linguistics computer science information retrieval including the growing speciality of question answering library sciences human computer interaction and cognitive science Those in industry include corporate managers and researchers software product developers and engineers in information intensive companies such as on line database and web service providers

The Oxford Handbook of Computational Linguistics Ruslan Mitkov,2022-05-23 Ruslan Mitkov s highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition Alongside updated accounts of the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling text to speech synthesis translation technology opinion mining and sentiment analysis and the application of Natural Language Processing in educational and biomedical contexts among many others The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics the methods and resources used such as statistical modelling machine learning and corpus annotation key language processing tasks including text segmentation anaphora resolution and speech recognition and the major applications of Natural Language Processing from machine translation to author profiling The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries
