Jagacinski, John M. Flach, 2018-10-08 This textbook provides a tutorial introduction to behavioral applications of control theory Control theory describes the information one should be sensitive to and the pattern of influence that one should exert on a dynamic system in order to achieve a goal As such it is applicable to various forms of dynamic behavior The book primarily deals with manual control e g moving the cursor on a computer screen lifting an object hitting a ball driving a car both as a substantive area of study and as a useful perspective for approaching control theory It is the experience of the authors that by imagining themselves as part of a manual control system students are better able to learn numerous concepts in this field Topics include varieties of control theory such as classical optimal fuzzy adaptive and learning control as well as perception and decision making in dynamic contexts The authors also discuss implications of control theory for how experiments can be conducted in the behavioral sciences In each of these areas they have provided brief essays intended to convey key concepts that enable the reader to more easily pursue additional readings Behavioral scientists teaching control courses will be very interested in this book Practitioner's Guide to Evaluating Change with Neuropsychological Assessment Instruments Robert J.
