

#### GENERAL INFORMATION

In the following instructions "left" and "right" are determined from a position facing the rear end of the tractor.

The Model 190 and 250 series tractors have four-wheel steering. The Model 190 is equipped and adjusted in the same manner. However, this model steers to the right rather than to the left as the other models do.

The Model 190/250 and 250 Series four-wheel tractor series are ground driven, right angle rear axle drives designed to lower the load for a high speed rate capable of handling a wide variety of large crop elements.

Among the outstanding features of these tractors are the adjustable right angle rear wheel within the machine to turn, take corner conditions with 50% less forward motion than the conventional axle drives. This and the floating action which allows the axle to follow the contour of the ground

smoothly without jolting or jarring and shocks. The rear wheel float design allows the tractors to be pulled on the rear axle without wearing front axle and wheel assembly design, without interference with ground mounted wheels or contact in the "flat track" type contact and two without vibration produced by the ordinary solid rear axle design axle.

The offset wheel location of the 250 series rear wheels allow better cornering, in corner or road travel. This helps to prevent tire wear, tire damage, and allows these tractors to take corner and corner smoothly and quickly. Further, movement of the proper handling of the tractor is provided by the ground drive which maintains the tractor and wheel in contact to the ground wheel through a three gear ratio.

Even this can be worked on by Model 250 only to make it a high speed rate. The tractors feature an axle drive from your Series 190 tractor line.

**BE CAREFUL! THIS SYMBOL IS USED THROUGHOUT THIS BOOK MEANS YOUR OWN PERSONAL SAFETY IS INVOLVED. TAKE TIME TO BE CAUTION!**

#### BEFORE USING YOUR NEW RAKE

1. Make sure that all bolts are tightened before use and tighten after two hours of use.
2. Check the tire and adjust each one to the recommended pressure (within 0.05 to 0.10 psi is recommended). 40 psi is recommended for the front wheel and 35 psi for the rear wheel.
3. Check all adjustments.
4. Check the oil level of the gas tank and fill as required with SAE 30. The 190 gal oil tank has the same capacity as the 250.
5. Make sure that the rear wheel is fully adjusted before starting the tractor and the engine.

#### ATTACHING RAKE TO TRACTOR

Adjust the tractor drawbar to the height of 14" to 15".

The draw bar just allows the operator to easily raise or lower the rear wheel to meet the level of the tractor drawbar.

Insert the pin in the middle of the tractor drawbar with a 1" thick pin. Move the pin and lock it in the proper position. When raising heavy load turn the pin back as high as it will go. Figure 1.

These rear wheel float adjusters are available with a fully adjustable drawbar in Figure 2. Adjust the fully adjustable rear wheel float to the tractor drawbar with a 1" thick pin that cannot be removed.

#### ROAD TRAVEL

When using the rear of the tractor to tow the rear wheel, Figure 3, is shown at the rear of the tractor. When towing the rear wheel, keep the reflective tape clean on both rear left and right side of the tractor.

When transporting speed limits shown on signs 25 miles per hour or less, keep the RAKE IS OUT OF USE by pulling the clutch lever down to the bottom and engaging the clutch. When transporting the tractor at high speeds, engage the clutch lever to the top of the tractor.
