Pulse™ System

The Pulse™ system's automated 24/7 belt monitoring represents a significant advance over conventional inspections. Its assurance of belt integrity sets a new standard for monitoring, maintenance and safety.

MAJOR BENEFITS

Continuous monitoring brings peace of mind

Immediate, automatic reporting enhances safety and eliminates service interruptions for belt inspections.

Advance notice of belt wear helps manage maintenance scheduling.

Superior monitoring while eliminating inspection downtime

Otis' Pulse system continuously monitors and ensures the integrity of the Gen2™ flat coated-steel belts.
Conventional wire rope inspection relies on periodic visual examination of the lifting ropes, which requires taking the elevator out of service. These manual inspections involve examining the rope for broken exterior strands. This time-consuming method can leave broken interior strands undetected.

The Pulse system's automatic 24/7 monitoring and reporting eliminates the need for elevator downtime while greatly enhancing the quality and reliability of the inspection.

The unit is located at the top of the hoistway, where it is connected at the belt termination.
