OUR MAGIC NEVIL. MASKELYNE, 2018 **Our Magic: The Art and Theory of Magic** , **Our Magic** Nevil Maskelyne, David Devant, 1946 *Our Magic* Nevil Maskelyne, David Devant, 1911 **Our Magic** Nevil Maskelyne, 2017-07-23 Excerpt from *Our Magic The Art in Magic the Theory of Magic the Practice of Magic* We do not for a moment suggest that what we have written herein represents the last word to be said concerning magic on the contrary we are well aware that our book is but the commencement of a new departure which We hope may lead to the full elucidation of our subject in every particular The ramifications and extensions of knowledge connected with magic are so vast in their scope that no single treatise can possibly include all that a skilled magician ought to know Consequently we can claim no more than the production of a book which in our opinion serves to indicate rather than to exhaust the manifold topics associated with the art science and practice of magic About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works **Our Magic. The Art in Magic, the Theory of Magic, the Practice of Magic. By Nevil Maskelyne and David Devant. With 2 Portraits and 86 Figures, Mainly Photographic Reproductions of Preparation and Manipulation** John Nevil MASKELYNE (Magician.), David DEVANT (pseud.), 1912 **The Magic Wand** , 1911 **The Psychology of Magic and the Magic of Psychology** Amir Raz, Jay A. Olson, Gustav Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that

they actually did not make. Moreover, magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab-based settings. Examining how magicians consistently influence spectators, for example, can elucidate important aspects in the study of persuasion, trust, decision making, and even processes spanning authorship and agency. Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician. On the other hand, psychological science can advance the art of magic. The psychology of deception, a relatively understudied field, explores the intentional creation of false beliefs and how people often go wrong. Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities—perceptual, logical, emotional, and temporal—becomes all the more revealing when top-down influences including expectation, symbolic thinking, and framing join the fray. Over the years, science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences. Furthermore, on occasion, science leads to the creation of novel effects or the refinement of existing ones based on systematic methods. For example, by simulating a specific card routine using a series of computer stimuli, researchers have decomposed the effect and reconstructed it into a more effective routine. Other magic effects depend on meaningful psychological knowledge, such as which type of information is difficult to retain or what changes capture attention. Behavioural scientists measure and study these factors. By combining analytical findings with performer intuitions, psychological science begets effective magic. Whereas science strives on parsimony and independent replication of results, magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection. This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception.

The Player Piano and the Edwardian Novel Cecilia Björken-Nyberg, 2016-03-03 In her study of music making in the Edwardian novel, Cecilia Björken-Nyberg argues that the invention and development of the player piano had a significant effect on the perception, performance, and appreciation of music during the period. In contrast to existing devices for producing music mechanically, such as the phonograph and gramophone, the player piano granted its operator freedom of individual expression by permitting the performer to modify the tempo. Because the traditional piano was the undisputed altar of domestic and highly gendered music making, Björken-Nyberg suggests the potential for intervention by the mechanical piano's operator had a subversive effect on traditional notions about the status of the musical work itself and about the people who were variously defined by their relationship to it. She examines works by Dorothy Richardson, E. M. Forster, Henry Handel Richardson, Max Beerbohm, and Compton Mackenzie among others, contending that Edwardian fiction with music as a subject undermined the prevalent antithesis expressed in contemporary music literature between a nineteenth-century conception of music as a means of transcendence and the increasing mechanisation of music as represented by the player piano. Her timely survey of the player piano in the context of Edwardian commercial and technical discourse draws on a rich array of archival materials to shed
