**Transnational Management** Christopher A. Bartlett, Paul W. Beamish, 2018-03-01 Transnational Management provides an integrated conceptual framework to guide students and instructors through the challenges facing today's multinational enterprises. Through text, narrative, and cases, the authors skillfully examine the development of strategy, organizational capabilities, and management roles and responsibilities for operating in the global economy. The key concepts are developed in eight chapters that are supplemented by carefully selected practical case studies from world-leading case writers. All chapters have been revised and updated for this eighth edition to reflect the latest thinking in transnational management while retaining the book's strong integrated conceptual framework. Ten new cases have been added and four others updated. A full range of online support materials are available, including detailed case teaching notes, almost 200 PowerPoint slides, and a test bank. Suitable for MBA executive education and senior undergraduate students studying international management, international business, or global strategy courses, Transnational Management offers a uniquely global perspective on the subject.

**Architecture** ,1988 People Flow in Buildings Marja-Liisa Siikonen, 2021-09-10 Discover how to measure, control, model, and plan people flow within modern buildings with this one-stop resource from a leading professional. People Flow in Buildings delivers a comprehensive and insightful description of people flow analysis with software-based tools. The book offers readers an up-to-date overview of mathematical optimization methods used in control systems and transportation planning methods used to manage vertical and horizontal transportation. The text offers a starting point for selecting the optimal transportation equipment for new buildings and those being modernized. It provides insight into making passenger journeys pleasant and smooth while providing readers with an examination of how modern trends in building usage, like increasingly tall buildings and COVID-19, affect people flow planning in buildings. People Flow in Buildings clearly defines the terms and symbols it includes and then moves on to deal with the measurement, control, modelling, and planning of people flow within buildings of all kinds. Each chapter contains an introduction describing its contents and the background of the subject. Included appendices describe measured passenger data and performed analyses. Readers will also benefit from the inclusion of a thorough introduction to people counting methods, including counting technology inside and outside buildings, passenger traffic components, and manual people counting. An examination of the passenger arrival process in building, including the Poisson arrival process and probability density function and passenger arrivals in batches. A consideration of daily vertical passenger traffic profiles, including two-way traffic profiles and the effects of inter-floor traffic. An exploration of people flow solutions, including stairs, escalators, and elevators with collective and destination group control systems, as well as double-deck and multicar systems. People flow calculation and simulation models. Elevator planning with ISO simulation method. Elevator planning and evacuation of tall buildings. Perfect for software designers in the private sector and academia.

People Flow in Buildings will also earn a place in the libraries of elevator consultants manufacturers and architects who seek a one stop reference for transportation devices from a functional and design perspective as opposed to a hardware perspective
