Oil Palm World Agriculture:

The Oil Palm R. H. V. Corley, P. B. H. Tinker, 2015-10-06 The oil palm is the world's most valuable oil crop. Its production has increased over the decades, reaching 56 million tons in 2013, and it gives the highest yields per hectare of all oil crops. Remarkably, oil palm has remained profitable through periods of low prices. Demand for palm oil is also expanding with the edible demand now complemented by added demand from biodiesel producers. The Oil Palm is the definitive reference work on this important crop. This fifth edition features new topics including the conversion of palm oil to biodiesel and discussions about the impacts of palm oil production on the environment and effects of climate change alongside comprehensively revised chapters with updated references throughout. The Oil Palm Fifth Edition will be useful to researchers, plantation and mill managers who wish to understand the science underlying recommended practices. It is an indispensable reference for agriculture students and all those working in the oil palm industry worldwide. Oil Palm Jonathan E. Robins, 2021-05-21

Oil palms are ubiquitous, grown in nearly every tropical country. They supply the world with more edible fat than any other plant and play a role in scores of packaged products from lipstick and soap to margarine and cookies. And as Jonathan E. Robins shows, sweeping social transformations carried the plant around the planet. First brought to the global stage in the holds of slave ships, palm oil became a quintessential commodity in the Industrial Revolution. Imperialists hungry for cheap fat subjugated Africa's oil palm landscapes and the people who worked them. In the twentieth century, the World Bank promulgated oil palm agriculture as a panacea to rural development in Southeast Asia and across the tropics. As plantation companies tore into rainforests, evicting farmers in the name of progress, the oil palm continued its rise to dominance, sparking new controversies over trade, land, and labor rights, human health, and the environment. By telling the story of the oil palm across multiple centuries and continents, Robins demonstrates how the fruits of an African palm tree became a key commodity in the story of global capitalism, beginning in the eras of slavery and imperialism, persisting through decolonization and stretching to the present day. **World Agriculture and the Environment** Jason Clay, 2013-02-22

World Agriculture and the Environment presents a unique assessment of agricultural commodity production and the environmental problems it causes, along with prescriptions for increasing efficiency and reducing damage to natural systems. Drawing on his extensive travel and research in agricultural regions around the world and employing statistics from a range of authoritative sources, including the United Nations Food and Agriculture Organization, the author examines twenty of the world's major crops, including beef, coffee, corn, rice, rubber, shrimp, sorghum, tea, and tobacco. For each crop, he offers comparative information, including a fast facts overview section that summarizes key data for the crop's main producing and consuming countries, main types of production, market trend information, and market chain analyses, major environmental impacts, management strategies, and best practices, key contacts, and references. With maps of major commodity production areas worldwide, the book represents the first truly global portrait of agricultural production patterns and environmental

International Trade Policies and Global Agriculture Mary E. Lassanyi,1993 **Advances in Agricultural Machinery and Technologies** Guangnan Chen,2018-03-05 The agricultural industry is dealing with enormous challenges across the globe including the limited availability of arable lands and fresh water as well as the effect of climate change

Machinery plays a crucial role in agriculture and farming systems in order to feed the world's growing population. In the last decade we have witnessed major advances in agricultural machinery and technologies particularly as manufacturers and researchers develop and apply various novel ways of automation as well as the data and information gathering and analyzing capabilities of their machinery. This book presents the state of the art information on the important innovations in the agricultural and horticultural industry. It reviews and presents different novel technologies and implementation of these technologies to optimize farming processes and food production. There are four sections each addressing a specific area of development. Section I discusses the recent development of farm machinery and technology. Section II focuses on water and irrigation engineering. Section III covers harvesting and post harvest technology. Section IV describes computer modelling and simulation. Each section highlights current industry trends and latest research progress. This book is ideal for those working in or are associated with the fields of agriculture, agri-food chain and technology development and promotion.

The Oxford Handbook of Food, Water and Society Tony Allan, Brendan Bromwich, Martin Keulertz, Anthony Colman, 2019-09-27. Food, water and society: what is managed by whom and with what impacts? Our food supply chains are at risk. Water resources, sometimes scarce, often damaged and always under-valued, are among the major reasons why food and water security rank high every year in the World Economic Forum's major global risk analysis. A stable and sustainable food system is critical to society's survival. This Handbook shows that keeping the food system stable comes at the expense of the environment, especially of water resources, and those who consume and manage them. The way the food system operates reflects hard political realities. Rather than pay for the environmental costs of sustainable production, society expects food at ever lower prices. Governments reflect their electorates in this regard. Given that farm production may account for as little as 10% of the food value chain in wealthy economies, it is striking that governments have been unwilling or unable to put in place the essential laws and accountability that would enable farmers to ensure both production and stewardship. Corporate food traders, food manufacturers and retailers, on the other hand, operate in markets that make profits and pay taxes. But these corporations are not contractually bound to utilize highly nutritious, sustainably produced food commodities. The articles in this Oxford Handbook have been written by water and food system scientists and professionals, including farmers' rarely heard voices, who understand the problems of food producers, food manufacturers and regulating markets and public policy. The articles address the blind spots of society and its public policymakers, demonstrating the importance of informing society about the consequences of its food preferences and the heroic challenges it is beginning to face. The damage we are doing to our water and soil ecosystems is as important as the damage we do to the atmosphere. Impressed by the technical and organizational advances of the past two

centuries the contributors featured in this book also take note of where economic inefficiencies and cultural deadlock in a 4 000 year old system are putting our critical food supply chains at risk

Reducing green house gas emissions from oil palm in Indonesia: Lessons from East Kalimantan Zachary R Anderson,Koen Kusters,Krystof Obidzinski,2015-10-06 Key Messages National and provincial emissions reduction goals and efforts to slow deforestation may come into conflict with provincial and district level economic ambitions based on agricultural development Around half of existing oil palm concessions in East Kalimantan are on forested and peatland areas If developed these plantations will release 206 MtCO_{2e} into the atmosphere The expansion of oil palm plantations on currently allocated concessions will lead to the conversion of forested lands and swamp areas including peatland and represents a critical source of carbon emissions To ensure the sustainability of plantation expansion the government needs to undertake a review of all existing plantation permits to ensure that they align with existing sustainability criteria Green Growth does not present a win win strategy and therefore requires strong political commitment and awareness of social and environmental tradeoffs
