Tanker Safety

► Risk Assessment and Hazard Spotting

- Working on tankers is inherently dangerous due to the nature of work at sea in an often hostile environment. This can be compounded by not taking suitable precautions before all operations to minimise the safety concerns. One of the most effective ways of increasing the safety of any work is to perform a risk assessment before starting. This involves identifying the hazards or risks of the job or area of work and then using control measures to reduce them. To aid in this, below are some definitions that are useful when creating a risk assessment:
- *Hazard* - Something or some circumstance with the potential to cause loss, harm or injury
- *Risk* - The likelihood that the loss, harm or injury will actually occur. Risk is equal to population x degree.
- *Population* - The group of people whom the hazard may endanger
- *Degree* - The amount of loss, harm or injury that may occur
- *Danger* - The consequences of the loss, harm or injury. The most severe dangers at sea are loss of life and loss of the vessel such that life is threatened.
