

LET'S START RELOADING

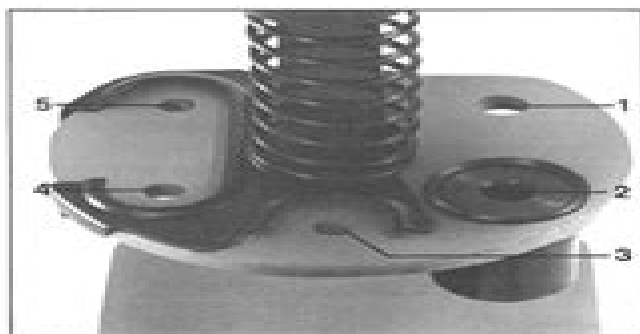

Photo No. 9

You will note that your shells are processed in a clockwise rotation starting at the resize/deprime station Photo #9 position #1 moving to the reprime station #2 to the powder wad and shot station #3 then moving to the crimp start station #4 and final crimp in station #5.

STEP ONE

Take an empty shell in your right hand and place it into the deprime/resize station Photo #10. With your left hand depress the handle to the bottom of its stroke. You will feel resistance as the resize ring starts resizing the brass, also you may feel the primer being ejected. Make sure that the handle is depressed to the full bottom of its stroke or you will not remove the primer or completely resize the shell. Now lift the handle to the full top of its stroke. As you come up you will feel resistance as the shell is pushed from the resize station and place this shell onto the reprime punch. Photo #11.

STEP TWO

At this time take a primer with your right hand and place it into the reprime pocket Photo #12. Again with your left hand depress the handle until the primer is firmly seated. Use no more pressure than is needed to seat the primer level with the bottom of the shell.

While raising the handle with your left hand remove the reprimed shell from the reprime punch with your right hand and place it into the shell holder at station #3 Photo #13.
