Off The Grid Modern Homes Alternative Energy:

Off the Grid Lori Ryker, 2005 Off the Grid confronts the ecological and cultural problems associated with the way we get and use energy and explains how it is possible to live in a beautifully designed home using much less no matter where your home is located Our homes are connected by a nearly invisible grid of infrastructure that binds us together It is a system of electrical poles wire substations hydroelectric dams telecommunication towers and water extraction and sewage systems From within this system we work play and raise families We have also created one of the greatest environmental challenges known to modern civilization The signs of our impact upon the world can be recognized in the reports of environmental changes occurring across the earth and they can also be seen in the growing failures of the energy grids across the world as the current system is stressed beyond its capacity Technologies that can be used to live off the grid geothermal energy use wind turbines photovoltaic arrays micro hydropower rainwater collection and reclamation and more are explained as author Lori Ryker shows how to choose and incorporate these sources according to geography and climate Off the Grid beautifully illustrates that this is not just a concept for rural living examples of homes that are off the grid to varying degrees are found in New York City Ontario Canada Stuttgart Germany Belmont California Pipe Creek Texas Clyde Park Montana Twin Lakes Minnesota Laytonville California Venice California and New South Wales Australia Off the Grid shows how we can take responsibility for our future choices and conveniences now and proves that off the grid living is a concept that can be easily understood and adopted by everyone regardless of where you live or how much money you make Lori Ryker grew up in Texas and has lived and worked in a variety of locations including Boston New York City Portland and Basel Switzerland She now resides in Livingston Montana where she teaches in the School of Architecture at Montana State University and is a partner along with Brett W Nave of Ryker Nave Design Their work has been published in The House You Build and Western Interiors and Design Ryker holds a MArch from Harvard Graduate School of Design and a Ph D from Texas A M University She is the author of Mockbee Coker Thought and Process Design and Construction of High-Performance Homes Franca Trubiano, 2013-03-05 Both professionals and students are increasingly committed to achieving high performance metrics in the design construction and operation of residential buildings This book responds to this demand by offering a comprehensive guide which features architectural innovations in building skin technologies which make lighter more transparent buildings high performing energy free architectural design principles and advances in building integrated photovoltaics essential engineering principles controls and approaches to simulation for achieving net zero the advantages of integrated design in residential construction and the challenges and opportunities it engenders detailed case studies of innovative homes which have incorporated low energy design solutions new materials alternative building assemblies digital fabrication integrated engineering systems and operational controls Divided into four parts the book discusses the requisite AEC Architecture Engineering and Construction knowledge needed when building a high performance home It also

communicates this information across four case studies which provide the reader with a thorough overview of all aspects to be considered in the design and construction of sustainable homes With contributions from experts in the field the book provides a well rounded and multi faceted approach This book is essential reading for students and professionals in design architecture engineering civil mechanical and electrical construction and energy management **The Greening of Architecture** Phillip James Tabb,A. Senem Deviren,2017-03-02 Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture

Green* Ryan M. Yonk,Randy T. Simmons,Brian C. Steed,2013 Renewable and carbon neutral energy have been promoted as the future of energy production in the United States Non traditional energy sources show promise as alternatives to fossil fuels and may provide a sustainable source of energy in increasingly uncertain energy markets However these new sources of energy face their own set of political administrative and legal challenges *Green vs Green* explores how mixed land ownership and existing law and regulation present serious challenges to the development of alternative energy sources in the United States Analytically examining and comparing five green energy sectors wind solar geothermal biofuel and hydro power Ryan M Yonk Randy T Simmons and Brian C Steed argue that discussing alternative energy without understanding these pitfalls creates unrealistic expectations regarding the ability to substitute green energy for traditional sources The micro goals of protecting individual areas species small scale ecosystems and other local environmental aims often limits ability to achieve macro goals like preventing global climate change or transitioning to large scale green energy production Statutes and regulations designed to protect environmental and cultural integrity from degradation directly conflict with other stated environmental ends Although there is substantial interest in adding clean

energy to the grid it appears that localized environmental interests interfere with broader environmental policy goals and the application of existing environmental laws and regulations may push us closer to gridlock Green vs Green provides a fascinating look into how existing environmental law created or will create substantial regulatory hurdles for future energy generations
