Morphometrics with R Julien Claude, 2008-12-15 This book aims to explain how to use R to perform morphometrics Morphometric analysis is the study of shape and size variations and covariations and their covariations with other variables Morphometrics is thus deeply rooted within statistical sciences While most applications concern biology morphometrics is becoming common tools used in archeological palaeontological geographical or medicine disciplines Since the recent formalizations of some of the ideas of predecessors such as Darcy Thompson and thanks to the development of computer technologies and new ways for appraising shape changes and variation morphometrics have undergone and are still undergoing a revolution Most techniques dealing with statistical shape analysis have been developed in the last three decades and the number of publications using morphometrics is increasing rapidly However the majority of these methods cannot be implemented in available software and therefore prospective students often need to acquire detailed knowledge in informatics and statistics before applying them to their data With acceleration in the accumulation of methods accompanying the emerging science of statistical shape analysis it is becoming important to use tools that allow some autonomy R easily helps fulfill this need R is a language and an environment for statistical computing and graphics Although there is an increasing number of computer applications that perform morphometrics using R has several advantages that confer to users considerable power and possible new horizons in a world that requires rapid adaptability

Proceedings - Soil and Crop Science Society of Florida Soil and Crop Science Society of Florida,1987 **Frontiers in Mathematical Biology** Simon A. Levin,2013-03-13 From a mathematical point of view physiologically structured population models are an underdeveloped branch of the theory of infinite dimensional dynamical systems We have called attention to four aspects i A choice has to be made about the kind of equations one extracts from the predominantly verbal arguments about the basic assumptions and subsequently uses as a starting point for a rigorous mathematical analysis Though differential equations are easy to formulate different mechanisms don't interact in infinitesimal time intervals and so end up as separate terms in the equations they may be hard to interpret rigorously as infinitesimal generators Integral equations constitute an attractive alternative ii The ability of physiologically structured population models to increase our understanding of the relation between mechanisms at the i level and phenomena at the p level will

depend strongly on the development of dynamical systems lab facilities which are applicable to this class of models iii Physiologically structured population models are ideally suited for the formulation of evolutionary questions Apart from the special case of age see Charlesworth 1980 Yodzis 1989 Caswell 1989 and the references given there hardly any theory exists at the moment This will hopefully change rapidly in the coming years Again the development of appropriate software may turn out to be crucial

Measuring and Reasoning Fred L. Bookstein, 2014-02-28 In *Measuring and Reasoning* Fred L Bookstein examines the way ordinary arithmetic and numerical patterns are translated into scientific understanding showing how the process relies on two carefully managed forms of argument Abduction the generation of new hypotheses to accord with findings that were surprising on previous hypotheses and Consilience the confirmation of numerical pattern claims by analogous findings at other levels of measurement These profound principles include an understanding of the role of arithmetic and more importantly of how numerical patterns found in one study can relate to numbers found in others More than 200 figures and diagrams illuminate the text The book can be read with profit by any student of the empirical nature or social sciences and by anyone concerned with how scientists persuade those of us who are not scientists why we should credit the most important claims about scientific facts or theories *Digital Human Modeling* Vincent G.
