Apart from nurses, other occupational groups in the healthcare domain at risk include health care assistants and facility cleaners. So, for these people, it is important to enroll in a [patient manual handling course Dublin](#). With the right education, they will get to know how to handle patients safely without injuring themselves and the patients.

How Is Patient Handling Different From Other Manual Handling?

They depend on the healthcare workers to get to a nearby facility for an examination or even just to turn in the bed.

The problem with the human body is that it is an awkward heavy object. When you work in other domains and move objects, you will be doing it using a forklift. But, this is not possible in the healthcare domain. But, people continue to do [manual and patient handling](#) in other domains and healthcare without knowing the consequences. However, they would be aware of one or more of their colleagues with chronic neck or back pain in the healthcare domain.

When Do Issues Occur With Improper Manual Handling?

Injuries occur in the following cases in the healthcare domain:
