Pattern Discovery In Biomolecular Data Tools Techniques And Applications:

Pattern Discovery in Biomolecular Data Jason T. L. Wang, Bruce A. Shapiro, Dennis Shasha, 1999-10-28 Finding patterns in biomolecular data particularly in DNA and RNA is at the center of modern biological research. These data are complex and growing rapidly so the search for patterns requires increasingly sophisticated computer methods. Pattern Discovery in Biomolecular Data provides a clear up to date summary of the principal techniques. Each chapter is self contained and the techniques are drawn from many fields including graph theory, information theory, statistics, genetic algorithms, computer visualization and vision. Since pattern searches often benefit from multiple approaches, the book presents methods in their purest form so that readers can best choose the method or combination that fits their needs. The chapters focus on finding patterns in DNA, RNA and protein sequences, finding patterns in 2D and 3D structures and choosing system components. This volume will be invaluable for all workers in genomics and genetic analysis and others whose research requires biocomputing.

Data Mining in Bioinformatics Jason T. L. Wang, 2005 Written especially for computer scientists, all necessary biology is explained. Presents new techniques on gene expression data mining, gene mapping for disease detection and phylogenetic knowledge discovery.

Handbook of Toxicogenomics Jürgen Borlak, 2006-03-06 Toxicogenomics is a new dynamic and very promising field that can help optimize toxicity analyses and streamline research into active substances. It is of interest not only for basic research and development but also from a legal and ethical perspective. Here experts from all the fields mentioned will find solid information provided by an international team of experienced authors. With its approach as an interdisciplinary overview, it will prove particularly useful for all those needing to develop appropriate research strategies. The authors work for major research institutions such as the Fraunhofer Institute of Toxicology and Experimental Medicine, Germany; the German Cancer Research Center; the National Institute of Environmental Health Science, USA; the National Institute of Health Science, Japan; or for companies like Affymetrix, Altana, Pharma, Bayer, Boehringer Ingelheim, Bruker, Merck, Nimblegen, Novartis and Syngenta. Coverage ranges from the technology platforms applied, including DNA arrays or proteomics, via the bioinformatics tools required, right up to applications of toxicogenomics presented in numerous case studies, while also including an overview of national programs and initiatives as well as regulatory perspectives. Walter Rosenthal, Director of the Research Institute for Molecular Pharmacology in Berlin, praises the book: thus I would like to congratulate the publishers of this handbook, one that deals with an extremely hot topic. They have succeeded in gaining as authors leading representatives from this field. The Handbook impressively shows how modern genomic research is leading to rapid advances and new insights within toxicology.

Nonlinear Models in Medical Statistics James K. Lindsey, 2001 This text provides an introduction to the use of nonlinear models in medical statistics. It is a practical text rather than a theoretical one and assumes a basic knowledge in statistical modelling and of generalized linear models.
