cell types interact with each other in a normal three dimensional environment with normal levels of cytokines and growth factors Furthermore complex human diseases such as cancer diabetes or chronic inflammation can only be modeled in vivo Due to its small size its short reproduction time and the possibility to introduce specific gene mutations the mouse has become the favourite mammalian model organism to study in vivo function of genes during development and in disease This book combines review articles on selected subjects presented at the symposium Mouse as a Model Organism From Animals to Cells held in Rovaniemi Finland 2009 Among other topics high throughput phenotyping of mouse mutants mouse phenotypes dependent on nature and nurture and a spectrum of in vivo ex vivo and in vitro methods to study cancer in mice are described This book will give an excellent introduction to scientists interested in the use of mice as a model to understand complex biological questions in the post genomic era It will highlight the possibilities but also discuss the current problems and shortcomings to give a realistic view of the current state of art in this fascinating field of biomedical research
