among related bacteria. It also enables the bacteriologist to isolate and identify bacteria being part of the normal flora of these animals. In the first part of the book information is given on how to sample and cultivate from the animals. Hereafter general descriptions on various identification procedures are given. Topics include sampling and isolation techniques, staining methods, serology, PCR and other important tools. In the second part of the book important laboratory animal bacteria have been described in relation to both characteristics of the agent and characteristics of infection.
