**Microcontroller Based Adjustable Speed Closed-loop Dc Motor Drive** Yousef S. Ettomi Ali, 2004 The speed control of DC motors is crucial especially in applications where precisions and protection are of importance This work investigates and implements a microcontroller based adjustable speed drive system for a system shunt motor The theory of the armature voltage control algorithms in a closed loop system has been successfully implemented An IGBT switch is used in buck configuration to control armature voltage of the motor The PWM signal that controls the IGBT is generated from a motorola 68 HC11 microcontroller The speed of the motor is measured by a shaft encoder and directly fed to the microcontroller along with a speed reference signal A data acquisition routine reads the measured speed and the reference speed in digital format and generates the error value signal The error values signal is directly fed into the proportional controller routine to commute the

controller output Finally the controller output is used to generate a PWM which completes the loop by controlling the switch To protect the motor from gih current a current monitoring routine is implemented to read the motor current through a Hall effect sensor If the motor current is higher than its rated curent halting the PWM generation routine will stop Experimental results obtained have supported the idea of the design The speed of the motor could be controlled over a wide range using the dc chopper and the PWM Employment of a microcontroller has shown a great improvement in the acceleration speed reduction and deceleration and over current protection of a dc motor
