Rampal, 2007-07-27 Microarray Technology Volumes 1 and 2 present information in designing and fabricating arrays and binding studies with biological analytes while providing the reader with a broad description of microarray technology tools and their potential applications The first volume deals with methods and protocols for the preparation of microarrays The second volume details applications and data analysis which is important in analyzing the enormous data coming out of microarray experiments Among the topics discussed in Volume 1 Synthesis Methods are matrices in the synthesis of microarrays array optimization processes array based comparative genomic hybridization 60 mer oligonucleotide probes bifunctional reagents NTMTA and NTPAC and high density arrays using digital microarray synthesis platforms Other topics include multiplex ligation dependent probe amplification MLPA hybridization conditions in situ synthesized oligo arrays peptide arrays high density replication tools HDRT protocols for the quantification of oligo hybridization glyco bead arrays and an investigation into the emerging nano technology Microarray Technology Volumes 1 and 2 provide ample information to all levels of scientists from novice to those intimately familiar with array technology

Intelligent Data Engineering and Automated Learning - IDEAL 2008 Colin Fyfe, Dongsup Kim, Soo-Young Lee, Hujun Yin, 2008-11-04 IDEAL 2008 was the ninth IDEAL conference to take place earlier editions were held in Hong Kong the UK Australia and Spain This was the first time though hopefully not the last time that it took place in Daejeon South Korea during November 2 5 2008 As the name suggests the conference attracts researchers who are involved in either data engineering or learning or increasingly both The former topic involves such aspects as data mining or intelligent knowledge discovery from databases information retrieval systems data warehousing speech image video processing and multimedia data analysis There has been a traditional strand of data engineering at IDEAL conferences which has been based on financial data management such as fraud detection portfolio analysis prediction and so on This has more recently been joined by a strand devoted to bioinformatics particularly neuroinformatics and gene expression analysis Learning is the other major topic for these conferences and this is addressed by researchers in artificial neural networks machine learning evolutionary algorithms artificial immune systems and algorithms probabilistic modelling fuzzy systems and agent modelling The core of all these algorithms is adaptation

DNA Microarrays, Part B: Databases and Statistics, 2006-08-28 Modern DNA microarray technologies have evolved over the past 25 years to the point where it is now possible to take many million measurements from a single experiment These two volumes Parts A B in the Methods in Enzymology series provide methods that will shepherd any molecular biologist through the process of planning performing

and publishing microarray results Part A starts with an overview of a number of microarray platforms both commercial and academically produced and includes wet bench protocols for performing traditional expression analysis and derivative techniques such as detection of transcription factor occupancy and chromatin status Wet bench protocols and troubleshooting techniques continue into Part B These techniques are well rooted in traditional molecular biology and while they require traditional care a researcher that can reproducibly generate beautiful Northern or Southern blots should have no difficulty generating beautiful array hybridizations Data management is a more recent problem for most biologists The bulk of Part B provides a range of techniques for data handling This includes critical issues from normalization within and between arrays to uploading your results to the public repositories for array data and how to integrate data from multiple sources There are chapters in Part B for both the debutant and the expert bioinformatician Provides an overview of platforms Includes experimental design and wet bench protocols Presents statistical and data analysis methods array databases data visualization and meta analysis

Microarray Innovations Gary Hardiman,2009-04-02 In recent years high density DNA microarrays have revolutionized biomedical research and drug discovery efforts by the pharmaceutical industry Their efficacy in identifying and prioritizing drug targets based on their ability to confirm a large number of gene expression measurements in parallel has become a key element in drug discovery Microarr

Microarrays for the Neurosciences Daniel H. Geschwind,Jeffrey P. Gregg,2002 The effort to sequence the human genome has generated a new discipline functional genomics or the study of the relationship between the genetic code and its biologic potential Gene expression studies are made possible not only by the decoding of the human genome but by the development of new technologies The preeminent technology in this area DNA microarrays is helping to revolutionize the field of neuroscience **Gene**

Expression Profiling by Microarrays Wolf-Karsten Hofmann,2006-06-22 Microarray analysis is a highly efficient tool for assessing the expression of a large number of genes simultaneously and offers a new means to classify cancer and other diseases Gene expression profiling can also be used to predict clinical outcome and response to specific therapeutic agents This survey spans recent applications of microarrays in clinical medicine covering malignant disease including acute leukaemias lymphoid malignancies and breast cancer together with diabetes and heart disease Investigators in oncology pharmacology and related clinical sciences as well as basic scientists will value this review of a promising new diagnostic and prognostic technology
