## **Microbial Ecological Theory Current Perspectives:**

Microbial Ecological Theory Lesley A. Ogilvie, Penny R. Hirsch, 2012 The vast explosion of high resolution molecular data in the past few years has provided an unprecedented glimpse into the microbial world This book synthesizes current viewpoints and knowledge on microbial ecological theory The book has assembled a collection of essays by a diverse group of well respected scientists who merge the boundaries of ecology and microbiology to explore some of the central tenets of macro ecological theory with a microbial perspective The contributors explore the mainstays of macro ecology asking questions such as do microbes have biogeography and does a microbial species concept exist Additionally the book shows how high resolution molecular data is informing and underpinning the evolution of microbial ecological theory It demonstrates how the application of macro ecological theory to the microbial world is not only enhancing our understanding of microbial ecology but it also provides a reference point for the development of new theories Written for graduate students and academic researchers the book encourages cross disciplinary thinking and provides direction and perspective on the still fledgling field of microbial ecological theory It is highly recommended for all microbiology libraries

Microbiome Community Ecology Muhammad Saleem, 2015-01-20 This book reviews the mechanisms patterns and processes that regulate prokaryotic diversity through different habitats in the context of evolutionary and ecological hypotheses principles and theories Despite the tremendous role of prokaryotic diversity in the function of the global ecosystem it remains understudied in comparison to the rest of biological diversity In this book the authors argue that understanding the mechanisms of species coexistence functioning relationships e g nutrient cycling and host fitness and trophic and non trophic interactions are helpful in addressing the future challenges in basic and applied research in microbial ecology The authors also examine the ecological and evolutionary responses of prokaryotes to

global change and biodiversity loss Ecological Diversity of the Microbiome in the Context of Ecology Theory and Climate Change aims to bring prokaryotes into the focus of ecological and evolutionary research especially in the context of global change

*Advances in Soil Science*, 2013-03-07 From the beginning of agriculture until about 1950 increased food production came almost entirely from expanding the cropland base Since 1950 however the yield per unit of land area for major crops has increased dramatically Much of the increase in yields was because of increased inputs of energy Between 1950 and 1985 the farm tractor fleet quadrupled world irrigated area tripled and use of fertilizer increased ninefold Between 1950 and 1985 the total energy used in world agriculture increased 6.9 times Irrigation played a particularly important role in the rapid increase in food production between 1950 and 1985 The world's irrigated land in 1950 totaled 94 million hectares but increased to 140 million by 1960 to 198 million by 1970 and to 271 million hectares in 1985 However the current rate of expansion has slowed to less than 1 % per year The world population continues to increase and agricultural production by the year 2000 will have to be 50 to 60% greater than in 1980 to meet demands This continued demand for food and fiber coupled with the sharp decline in the growth rate of irrigation development means that much of the additional agricultural production in future years must come from cultivated land that is not irrigated Agricultural production will be expanded in the arid and semiarid regions because these regions make up vast areas in developing countries where populations are rapidly rising

Advances in Microbial Ecology J.G. Jones, 2013-11-11 Kevin Marshall is a hard act to follow Volume 13 of *Advances in Microbial Ecology* has been produced by a new editorial board and we the

members of that board are delighted to have the opportunity to pay tribute to Kevin's achievements. In his time as Series Editor the quality of the chapters submitted and the range of subject matter covered have ensured an expanding and more stimulated readership. This represents a considerable achievement given the growth in the number of review volumes and the increasing tendency for journals to publish review articles. The achievement was reached not only through meticulous attention to quality and detail but also by providing a forum for the expression of views, information and results that would stimulate discussion. *Advances in Microbial Ecology* will continue to provide such a focus although because of the frequency of publication it would not be practicable to introduce a reply or comment section. Although we do not deliberately aim to provide a forum for controversy we encourage speculation based on sound scientific arguments. In addition we would like to encourage authors to offer chapters for consideration. In the past the volumes have largely comprised invited chapters. With the best will in the world an editorial board of four cannot claim adequate coverage of such a vast and rapidly developing research area. We would therefore welcome submission of outline plans for chapters which should be sent to the Editor.
