Stelzer,2012-07-03 EVALUATION OF OCEAN ENERGY CONVERSION BASED ON LINEAR GENERATOR CONCEPTS As the world continues to demand greater productivity and lifestyle enrichment through technological advancements the demand for electrical power is predicted to escalate dramatically Thus far this increased demand has been primarily supplied from fossil fueled plants Unfortunately the burning of fossil fuels produce harmful carbon dioxide pollution as a by product It has been hypothesized that unless a clean renewable and efficient alternate source of energy is found soon the world may either exhaust its supplies of energy producing materials or drastically degrade its environment However motions that occur naturally such as ocean waves can play a significant role in generating environmentally safe and economically viable energy for human utilization The focus of this work predicts the electrical power generation capabilities from a seabed mounted linear generator tethered to a floating buoy heaving under the influence of passing ocean surface waves Mathematical models are introduced which simulate the oceans surface conditions under both the regular basic and irregular natural wave regimes the heave vertical displacement response for a floating buoy and the resulting electrical output parameters of the linear generator Within these models various physical and electrical parameters are altered in an attempt to generate a greater output power for a given sea state condition making the Wave Energy Converter WEC more efficient It is shown theoretically that the buoy can be designed to have a greater heave response than that of the height of a passing wave resulting in an increase in generated power from the linear generator Author Information Dr Michael A Stelzer is a Certified Project Manager and Senior Electronic Technician with a Ph D in Electrical and Computer Engineering During his career to date Mr Stelzer has published four additional educational titles and has been admitted into Cambridge Who s Who top 101 industry experts *Sustainable Biofloc Systems for Marine Shrimp* Tzachi Matzliach Samocha,2019-07-25 Sustainable Biofloc Systems for Marine Shrimp describes the biofloc dominated aquaculture systems developed over 20 years of research at Texas A M AgriLife Research Mariculture Laboratory for the nursery and grow out production of the Pacific White Shrimp *Litopenaeus vannamei* The book is useful for all stakeholders with special attention given to entrepreneurs interested in building a pilot biofloc dominated system In addition to the content of its 15 chapters that cover topics on design operation and economic analysis the book includes appendices that expand on relevant topics links to Excel sheets that assist in calculations and video links that illustrate important operations tasks Presents the most recent trials on nursery gross out of *L vannamei* Includes a discussion of site selection equipment options and water sources Provides a step by step guides from tank preparation to feeding and harvest *Online Teaching at Its Best* Linda B.
