Phenomenalism, Phenomenology, and the Question of Time Adam Berg, 2015-12-15 Phenomenalism Phenomenology and the Question of Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book s historical conceptual perspective draws attention to the ways in which Husserl s twentieth century advance of phenomenological method was conceived in relation to Mach s late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach s phenomenalism appears to be in stark contrast to Husserl s phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl s revolutionary method of phenomenology in connection to Mach s earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach s philosophical work and Husserl s early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness It is precisely through the notion of irreversibility that both perspectives scientific and phenomenological explicate time s arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects The issue of time s arrow irreversibility and Boltzmann s physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl s work on phenomenology and the role of temporality to consciousness **Social**
