1. Introduction

The premise of this Special Issue is that legal systems are complex adaptive systems, and thus complexity science can be usefully applied to improve understanding of how legal systems operate, perform and change over time. The articles that follow take this proposition as a given and act on it using a variety of methods applied to a broad array of legal system attributes and contexts. Yet not too long ago some prominent legal scholars expressed scepticism that this field of study would produce more than broad generalizations, if even that [1–3]. To orient readers unfamiliar with this field and its history, here we offer a brief background on how using complexity science to study legal systems has advanced from claims of ‘pseudoscience’ status [3, p. 8] to a widely adopted mainstream method. We then situate and summarize the articles.

The focus of complexity science is complex adaptive systems (CAS), systems ‘in which large networks of components with no central control and simple rules of operation give rise to complex collective behavior, sophisticated information processing and adaptation via learning or evolution’ [4]. It is important to distinguish CAS from systems that are merely complicated, such as a combustion engine, or complex but non-adaptive, such as a hurricane [4]. A forest or coastal ecosystem, for

Ecological Law and the Planetary Crisis Geoffrey Garver, 2020-10-29 This book uses a transdisciplinary systems approach to examine how Earth's human caused ecological crisis arose and presents a new legal approach for overcoming it. *Ecological Law and the Planetary Crisis* first examines how the history of humanity's social metabolism along with the history of human inventions and ideas led to the human Earth dilemma we see today and explains why contemporary law is inadequate for confronting this dilemma. The book goes on to propose ecological law that maintains human activity within ecological limits such as planetary boundaries while ensuring social justice and equity as an essential element of an urgently needed radical pathway of change toward a perpetual mutually enhancing human Earth relationship. Finally, it offers a systems based analytical tool for organizing actions to promote the transition from environmental to ecological law. Increasing the visibility, clarity, and development of ecological law, this book will be of great interest to students and scholars of ecological and environmental law and governance.

Space Odysseys Jørgen Ole Bærenholdt, Kirsten Simonsen, 2017-05-15 The nature of spatial imaginations has become central to a range of major social and political debates. Narratives on spatial inequality from the North-South divide in global economic and political visions to marginalisation and ghettoisation in Western cities appear regularly in our daily newspapers. Such examples indicate that issues of space spatiality are as crucial in our current societies as never before. *Space Odysseys* brings together leading social scientists including John Urry and Derek Gregory to address a number of central issues in spatiality and social relations in the early 21st century. Starting from the presupposition that space is a social dimension and a social construct, it then presents examples of these conceptions of space at work. While the book title's indirect reference to the film 2001: A Space Odyssey indicates the contributors' interest in questions of voyages and mobility, the plural use shows that the approaches to this conceptual exploration are multiple, reflecting differences in experience in social context and/or in gender, class, and ethnicity. The book is divided into three main sections. The first explores issues of mobility, immobility, and embodied narratives; the second section deals with territoriality, mobility, and identity politics; and the final section concludes with chapters on the spatial production of knowledge.

Frontiers of Globalization Research: Ino Rossi, 2007-03-21 To bring this volume together, the editor asked leading scholars in the field of globalization to outline a research framework that reflects their own approach to the subject. The resulting book presents a broad spectrum of analytical approaches to globalization. Theoretical reviews are complemented by substantive chapters and methodological analyses. Contributors include scholars in the fields of sociology, anthropology, history, and political science. These writings have been organized into four sections: theoretical perspectives and cultural globalization; economic globalization; political globalization; and methodological approaches.

Law in Transition Ruth Buchanan,Peer Zumbansen,2014-12-01 Law has become the vehicle by which countries in the developing world including post conflict states or states undergoing constitutional transformation must steer the course of social and economic legal and political change Legal mechanisms in particular the instruments as well as concepts of human rights play an increasingly central role in the discourses and practices of both development and transitional justice These developments can be seen as part of a tendency towards convergence within the wider set of discourses and practices in global governance While this process of convergence of formerly distinct normative and conceptual fields of theory and practice has been both celebrated and critiqued at the level of theory the present collection provides through a series of studies drawn from a variety of contexts in which human rights advocacy and transitional justice initiatives are colliding with development projects programmes and objectives a more nuanced and critical account of contemporary developments The book includes essays by many of the leading experts writing at the intersection of development rights and transitional justice studies Notwithstanding the theoretical and practical challenges presented by the complex interaction of these fields the premise of the book is that it is only through engagement and dialogue among hitherto distinct fields of scholarship and practice that a better understanding of the institutional and normative issues arising in contemporary law and development and transitional justice contexts will be possible The book is designed for research and teaching at both undergraduate and graduate levels
