Jung the Mystic Gary Lachman, 2010-06-24 This bold compact new biography of Carl Jung fills a gap in our understanding of the pioneering psychiatrist by focusing on the occult and mystical dimension of Jung s life and work a critical but frequently misunderstood facet of his career Although he is often called the founding father of the New Age Carl Jung the legendary Swiss psychiatrist best known for his groundbreaking concepts like the collective unconscious archetype theory and synchronicity often took pains to avoid any explicit association with mysticism or the occult Yet Jung lived a life rich in paranormal experiences arguing for the existence of poltergeists in a debate with Sigmund Freud participating in s ances incorporating astrology into his therapeutic work reporting a near death experience and collaborating with the pioneering ESP researcher J B Rhine It is these critical experiences often fleetingly touched on in other biographies or critical studies and just as frequently used to make a case against Jung and his

philosophies that form the core of this exciting new biography Jung the Mystic While Jung's ghostwritten memoirs *Memories Dreams Reflections* touch on the role his mystical and occult experiences played in his life Gary Lachman's *Jung the Mystic* completes the circle Lachman assesses Jung's life and work from the viewpoint of Western esoteric tradition and helpfully places Jung in the context of other major esoteric thinkers such as Rudolf Steiner G I Gurdjieff and Emanuel Swedenborg In that respect this new biography appeals directly to the sensibility of spiritual readers who rightly see Jung as a pioneer of today's contemporary metaphysical culture

receptors controls the function of NK cells Activated NK cells respond by killing the infected or tumor cells without prior sensitization and by producing cytokines and chemokines It has been shown that NK cells cross talk with other immune cells such as dendritic cells and macrophages can shape T cell and B cell immune responses through direct interactions as well as by virtue of their cytokine chemokine production NK cells can also regulate immune responses by killing other immune cells including activated T cells or by producing anti inflammatory cytokines upon excessive inflammation However NK cells are not friends in all situations Indeed it has been shown in LCMV infected murine models that depending on the viral inoculation load NK cells may either help fight infection or can promote chronic infection Moreover in cancer models it has been shown that NK cells can kill anti tumoral T cells Recent studies of NK cells in patients with cancer support the notion of detrimental roles of NK cells Furthermore studies implicate NK cells in contributing to both graft rejection and tolerance to an allograft In some autoimmune diseases like rheumatoid arthritis NK cells may promote disease pathogenesis The scope of this Research Topic is to present and discuss knowledge on the role of NK cells in various diseases settings viral infections as well as other infections cancer transplantation and autoimmunity The aim is to discuss how NK cells respond during disease and specifically when why and how NK cells can be harmful and if they exert different functions production of specific cytokines inhibition of other immune cells through other mechanisms beside cytotoxicity in these situations Which are the NK cell subsets that play beneficial or deleterious roles in these diseases Are there different phenotypes associated with protective NK cells e g antiviral antitumoral and NK cells involved in disease pathogenesis How are these diverse NK cells activated and do they function primarily through direct cytotoxicity ADCC or cytokine and chemokine production What are the signals or interactions that can change and shape the NK cell response shifting them from protective to harmful We thank the authors that submitted reviews and original research manuscripts that help to better understand these questions with the aim that this will help the scientific community to determine what could be the main future research directions to better understand the role of NK cells in disease protection or development
