Cosmosapiens John Hands, 2017-10-31 A critical overview of scientific orthodoxy in an attempt to answer the fundamental questions what are we and why are we here Kirkus Reviews Specialist scientific fields are developing at incredibly swift speeds but what can they really tell us about how the universe began and how we as humans evolved to play such a dominant role on Earth John Hands's extraordinarily ambitious book merges scientific knowledge from multiple disciplines and evaluates without bias or preconception all the theories and evidence about the origin and evolution of matter consciousness and mankind The result a pearl of dialectical reasoning Publishers Weekly starred review provides the most comprehensive account yet of current ideas such as cosmic inflation dark energy the selfish gene and neurogenetic determinism In the clearest possible prose it differentiates the firmly established from the speculative and examines the claims of various fields to approach a unified theory of everything In doing so it challenges the orthodox consensus in those branches of cosmology biology and neuroscience that have ossified into dogma Its shocking and invigorating analysis Daily Telegraph A Best Science Book of 2015 reveals underlying patterns of cooperation complexification and convergence that lead to the unique emergence in humans of a self reflective consciousness that enables us to determine our future evolution This groundbreaking book is destined to become a classic of scientific thinking Praise for Cosmosapiens This is a truly exceptional piece of work Tim Crane Knightsbridge Professor of Philosophy The University of Cambridge A game changer In the tradition of Thomas Kuhn's The Structure of Scientific Revolutions this lucidly written penetrating analysis challenges us to rethink many things we take for granted about ourselves our society and our universe It will become a classic Peter Dreier E P Clapp Distinguished Professor of Politics Occidental College Hands is an astute observer of recent trends in scientific ideas bold enough to point out what he sees as sense and nonsense and intelligently explain why Even in cases where one might disagree the arguments are thought provoking Paul Steinhardt Albert Einstein Professor in Science Princeton University Universe, Human Species, Reality Jacques Vanier, 2025-08-11 Universe Human Species Reality A Physicalist Approach describes the functioning of the material universe with the use of intermediate mathematical language The book uses a physicalist approach in the sense that it is based entirely on physical phenomena and on reality and does not use philosophical or theological argumentation based on abstract reasoning not anchored in physical observations Using these observations the book develops the argument that the principle of least action plays a most important role in the functioning of the universe Furthermore if we extend our study we may find an answer to some questions that have not been answered yet As examples we may mention a few of those such as the exact nature of the Big Bang the essence of life and the nature of the intellect brain gap This book should be of interest to undergraduate students in physics and biology and to the general science reader Key Features Addresses our understanding of the complete basic physics of the universe Uses a physicalist approach rather than a philosophical and theological approach in studying the nature of the universe Gives a rather unique

conclusion relative to the functioning of the universe including Homo sapiens Science Fiction: the Evolutionary Mythology of the Future Thomas Lombardo, 2021-08-26 An in depth history of science primarily covering the 1930s from Superman to Olaf Stapledon's Star Maker The book examines science fiction literature art cinema and comics and the impact of culture philosophy science technology and futures studies on the development of science fiction Further the book describes the influence of science fiction on human society and the evolution of future consciousness Other key figures discussed include apek Hamilton Doc Smith Campbell Lovecraft C A Smith and Williamson Colonizing Ourselves José Angel Hernández, 2024-10-15 In the late nineteenth century the Mexican government seeking to fortify its northern borders and curb migration to the United States set out to relocate Mexico Texano families or Tejanos on Mexican land In Colonizing Ourselves Jose Angel Herna ndez explores these movements back to Mexico also known as autocolonization as distinct in the history of settler colonization Unlike other settler colonial states that relied heavily on overseas settlers especially from Europe and Asia Mexico received less than 1 percent of these nineteenth century immigrants This reality coupled with the growing migration of farmers and laborers northward toward the United States led ultimately to passage of the 1883 Land and Colonization Law This legislation offered incentives to any Mexican in the United States willing to resettle in the republic Tejanos as well as other Mexican expatriates abroad were to be granted twice the amount of land for settlement that other immigrants received The campaign worked ethnic Mexicans from Texas and the Mexican interior as well as Indigenous peoples from Mexico established numerous colonies on the northern frontier Leading one of the most notable back to Mexico movements was Luis Siliceo a Texan who with a subsidized newspaper El Colono and the backing of Porfirio Di az s administration secured a contract to resettle Tejano families across several Mexican states The story of this partnership which Herna ndez traces from the 1890s through the turn of the century provides insight into debates about settler colonization in Mexico Viewed from various global national and regional perspectives it helps to make sense of Mexico s autocolonization policy and its redefinition of Indigenous and settler populations during the nineteenth century

Becoming Ralph Hermansen, 2018-03-20 This unique book begins at time zero before the Universe began and tells how the Earth formed life began and became ever more complex over time Human evolution is explained and how we became dominant civilized and humanistic described

The Origin and Evolution of Humans and Humanness D. Tab Rasmussen, 1993 This volume represents the proceedings of the Irving Stone Memorial Symposium on The Origin of Humans and Humanness Scientists in the fields of anthropology archaeology biology and ecology were invited to discuss their research concerning the hows where's and whys of the evolutionary history of humans Using our knowledge of the behavior and reproduction of living primates chapter 1 describes what made the earliest human like animals of 4 million years ago different from their ape relatives While showing how the science of paleontology works the origin of our genus Homo is discussed in chapter 2 With

emphasis on those humans who first made regular use of stone tools some 2 million years ago chapter 3 interprets ancient human behavior and ecology from an archeological perspective Tools from genetics molecular biology archaeology and paleontology are used to examine the origin of modern Homo sapiens in chapter 4 Chapter 5 looks at the artistry of Ice Age craftsmen Finally using computer methods chapter 6 delves into the complex issue of how does human behavior change and what is the relationship between biological and cultural evolution *From Big Bang to Big Mystery* Brendan M.

Purcell,2012 Everyone knows about the mystery of the Big Bang what started it This book is about the other creation mystery where did human beings in particular come from It traces the material part of our origins from the Big Bang through evolution including the almost 7 million year hominid sequence up to the first humans in Africa over 150 000 years ago That data doesn't seem to explain what paleontologists and archaeologists call the Big Bang of Human Consciousness In his fascinating accessible and thorough study renowned priest and academic Brendan Purcell shows the complementarity that scientists theologians and philosophers bring to a deeper understanding of the mystery of human existence and human consciousness

Origin of the Human Species Dennis Bonnette,2021-11-08 This book evaluates the claims of scientific creationism versus materialistic evolution while examining other scenarios Consistently philosophical in methodology and perspective the book is radically interdisciplinary in content examining data and arguments drawn from natural science philosophy and theology This work challenges the limits of human knowledge regarding every major question touching on human origins

Human Evolution Charles River Charles River Editors,2018-04-08 Includes pictures Includes online resources and a bibliography for further reading We must however acknowledge that man with all his noble qualities still bears in his bodily frame the indelible stamp of his lowly origin Charles Darwin Ever since the human mind developed the capacity for thought people have pondered not just the meaning of life but the genesis of the world the universe and all the natural marvels and precious forms of life within it To this day all of these intricate subjects continue to be matters of great contention and they are often best encapsulated in the debate between creationism and evolution On the one hand are those who are adamant that it was God or some other supreme being that designed and crafted every detail of the universe as evidenced by the plethora of creation myths from various creeds and traditions Among one of the most well known etiological tales is the classic story of the Christian God who constructed the world in 6 days and man and woman out of clay and man's rib respectively This is a concept that many still cling to today approximately 38% of Americans believed in creationism in 2017 as reported by a Gallup Poll Then there are the more obscure narratives such as the Japanese creation myth which recounts how the god and goddess Izanagi and Izanami birthed from elements mixed together with one germ of life shaped the Japanese islands with some mud and the aid of a sacred staff The Mayans preached about Tepeu the maker of all things and Gucumatz the feathered spirit who produced the world with nothing but their thoughts and placed on Earth the first quartet of humans fashioned out of white and yellow corn On the other hand are those who believe or as they would say

accept evolution and scientific processes as facts As enthralling as such creation myths may be insist critics of creationism who campaign for their retirement there is not a sound shred of logic behind these time worn tales Renowned theoretical physicist Stephen Hawking arguably one of the most brilliant people to have ever lived stated Before we understand science it is natural to believe that God created the universe But now science offers a more convincing explanation His sentiments are echoed by famous atheist and evolutionary biologist Richard Dawkins in *The Selfish Gene* Today the theory of evolution is about as much open to doubt as the theory that the earth goes round the sun Some claim that evolution is just a theory as if it were merely an opinion esteemed astrophysicist Neil deGrasse Tyson another leading proponent of evolution adds The theory of evolution like the theory of gravity is a scientific fact Evolution really happened Accepting our kinship with all life on Earth is not only solid science In my view it s also a soaring spiritual experience Most scientists believe the evolution of humans has a history as long as life itself Anatomically modern humans and all other life that has existed on the planet first came about from the single celled microorganisms that emerged approximately 4 billion years ago Through the processes of mutation and natural selection all forms of life developed and this continuous lineage of life makes it difficult to say precisely when one species completely separates from another In other words scientists still debate when a human became a human rather than the ancestor species that came before In order to understand the history of human evolution an understanding of the mechanisms that essentially created modern humans needs to be understood These processes are natural selection and evolution

Human Evolution The History of the Evolution and Natural Selection Processes that Gave Rise to Modern Humans examines how humans evolved from microorganisms and the evolutionary theories that came about in the 19th century to explain it all
