Onesteel Reinforcing Guide To Reinforced Concrete Design:

Structural Design Guide to the ACI Building Code Edward S. Hoffman, David P. Gustafson, Albert J.

Gouwens, 2013-03-09 This book is intended to guide practicing structural engineers familiar with earlier ACI building codes into more profitable routine designs with the ACI 1995 Building Code ACI 318 95 Each new ACI Building Code expresses the latest knowledge of reinforced concrete in legal language for safe design application Beginning in 1956 with the introduction of ultimate strength design each new code offered better utilization of high strength reinforcement and the compressive strength of the concrete itself Each new code thus permitted more economy as to construction material but achieved it through more detailed and complicated design calculations In addition to competition requiring independent structural engineers to follow the latest code for economy it created a professional obligation to follow the latest code for accepted levels of structural safety The increasing complexity of codes has encouraged the use of computers for design and has stimulated the development of computer based handbooks Before computer software can be successfully used in the structural design of buildings preliminary sizes of structural elements must be established from handbook tables estimates or experienced first guesses for input into the computer High Tech Concrete: Where Technology and Engineering Meet

D.A. Hordijk, M. Luković, 2017-06-08 This book contains the proceedings of the fib Symposium High Tech Concrete Where Technology and Engineering Meet that was held in Maastricht The Netherlands in June 2017 This annual symposium was organised by the Dutch Concrete Association and the Belgian Concrete Association Topics addressed include materials technology modelling testing and design special loadings safety reliability and codes existing concrete structures durability and life time sustainability innovative building concepts challenging projects and historic concrete amongst others The fib International Federation for Structural Concrete is a not for profit association committed to advancing the technical economic aesthetic and environmental performance of concrete structures worldwide Guide Specifications for Alternate

Richard Liew,Ming-Xiang Xiong,Bing-Lin Lai,2021-08-04 High strength materials offer alternatives to frequently used materials for high rise construction A material of higher strength means a smaller member size is required to resist the design load However high strength concrete is brittle and high strength thin steel plates are prone to local buckling A solution to overcome such problems is to adopt a steel concrete composite design in which concrete provides lateral restraint to steel plates against local buckling and steel plates provide confinement to high strength concrete Design of Steel Concrete Composite Structures Using High Strength Materials provides guidance on the design of composite steel concrete structures using combined high strength concretes and steels The book includes a database of over 2 500 test results on composite columns to evaluate design methods and presents calculations to determine critical parameters affecting the strength and ductility of high strength composite columns Finally the book proposes design methods for axial moment interaction curves in composite columns This allows a unified approach to the design of columns with normal and high strength steel concrete materials This book offers civil engineers structural engineers and researchers studying the mechanical performance of composite structures in the use of high strength materials to design and construct advanced tall buildings Presents the design and construction of composite structures using high strength concrete and high strength steel complementing and extending Eurocode 4 standards Addresses a gap in
