

Frontend Architecture for Design Systems

Imagine what a large-scale web project would look like if frontend development were not treated as an add-on, but as an equal partner with backend development and content strategy. This practical book takes experienced web developers through the new discipline of frontend architecture, including the latest tools, standards, and best practices that have elevated frontend web development to an entirely new level.

Using real-world examples, case studies, and practical tips and tricks throughout, author Micah Godbolt introduces you to the four pillars of frontend architecture. He also provides compelling arguments for developers who want to embrace the mantle and fight to make frontend architecture a first-class citizen in their next project.

The four pillars include:

- **Code:** how to approach the HTML, CSS, and JavaScript of a design system
- **Process:** tools and processes for creating an efficient and error-proof workflow
- **Testing:** creating a stable foundation on which to build your site
- **Documentation:** tools for writing documentation while the work is in progress

“Frontend architecture is a new understanding of a better, more professional approach to web development. Micah has redefined our role in building websites for a new century!”

—Christopher Schmitt
Conference Chair
Environments for Humans

Micah Godbolt, frontend architect, author, podcaster, trainer and speaker at worldwide open source events, is often found promoting frontend architecture, Sass, visual regression testing, and schema-based design at his blog <https://micah.codes>. A Pacific Northwest native, he currently lives outside of Portland with his wife and two children.
