

A Variety of Street Users

In most cities, streets constitute the largest percentage of public property, and this space must be equitably distributed between the needs of the many different users of urban streets. Designs that accommodate people walking, cycling, riding transit, shopping public spaces, providing city services, doing business, or driving. This chapter identifies design elements and strategies to support safe and healthy space for the variety of people using urban streets.

Pedestrians

Pedestrians include people of all abilities and ages, sitting, walking, pushing, and rolling within urban streets. Designing for pedestrians means making streets accessible to the most vulnerable users. Design calls space with continuous, unobstructed sidewalks include street crossing, signage, building setbacks, design for human scale, and incorporate protection from adverse weather to ensure an enjoyable street experience.

Cyclists

Cyclists include people on bicycles, cycle rickshaws, and cargo bikes. Facilities should be safe, direct, intuitive, clearly delineated, and part of a coherent, connected network to encourage more people of all ages and confidence levels. Cycle tracks that create an effective distance from traffic, are well coordinated with signal timing, and are incorporated in a comprehensive design from the basis of a accessible and connected cycle network.

Transit Riders

Transit riders are people using collective transport such as rail, bus, or small collective vehicles. This sustainable mode of transportation dramatically increases the overall capacity and efficiency of the street. Dedicated space for transit supports convenient, reliable, and predictable service for riders. Accessible boarding areas provide safe and equitable use. The space dedicated to a transit network should be aligned with demand, meeting service needs without sacrificing streetscape quality.

Motorists

Motorists are people driving personal motor vehicles for on-demand, point-to-point transportation. This includes drivers of private cars, for hire vehicles, and commercial vans and those vehicles, trucks, and motorcycles must be designed to facilitate safe movement and manage interactions between motor vehicles, pedestrians, and cyclists.

Freight Operators and Service Providers

Freight operators and service providers are people driving vehicles that move goods or conduct other city services. These users benefit from dedicated route access and allocation of space for easy loading and unloading as well as dedicated routes and hours of operation. Emergency responders and cleaning vehicles need adequate space to operate, which must be accommodated while ensuring the safety of all other street users.

People Doing Business

People doing business include vendors, street vendors, and owners or workers at corners of commercial districts. These users provide important services that support vibrant, active, and engaging street environments. Adequate space should be allocated to these users. Provide regular cleaning maintenance schedules, power, and water to support commercial activity and improve the quality of life.

Smart Economy in Smart Cities T. M. Vinod Kumar, 2016-08-25 The present book highlights studies that show how smart cities promote urban economic development The book surveys the state of the art of Smart City Economic Development through a literature survey The book uses 13 in depth city research case studies in 10 countries such as the North America Europe Africa and Asia to explain how a smart economy changes the urban spatial system and vice versa This book focuses on exploratory city studies in different countries which investigate how urban spatial systems adapt to the specific needs of smart urban economy The theory of smart city economic development is not yet entirely understood and applied in metropolitan regional plans Smart urban economies are largely the result of the influence of ICT applications on all aspects of urban economy which in turn changes the land use system It points out that the dynamics of smart city GDP creation takes different paths which need further empirical study hypothesis testing and mathematical modelling Although there are

hypotheses on how smart cities generate wealth and social benefits for nations there are no significant empirical studies available on how they generate urban economic development through urban spatial adaptation This book with 13 cities research studies is one attempt to fill in the gap in knowledge base *FHWA News*, 2010 *Urban Planning in Mexico* Paavo Monkkonen, Jorge Canez, Aurora Echavarria, 2020-12-31 This book examines the scope of urban planning in Mexico through case studies of four municipalities Campeche Hermosillo Leon and Morelia that have recently updated their plans using new federal guidelines We seek to advance a research agenda on the impacts of planning and its effectiveness by proposing some foundations for how to assess planning processes as well as to provide guidance for the federal government of Mexico in its oversight of municipal planning practice and recommendations for the four cities we study We begin with the concern that the debate over whether urban planning in Mexico works suffers from a lack of shared definitions about what is and is not within the scope of urban planning and a shared conceptual framework for assessing the planning process The case studies were conducted as part of a graduate studio in the Department of Urban Planning at UCLA They rely on multiple interviews with planners and professionals in each city as well as documentary and data analysis and literature reviews We use a framework of five processes creating a plan implementing the plan raising revenue to fund urban infrastructure upgrading existing neighborhoods to ensure equal access across neighborhoods and investing in new infrastructure to support growth Each case presents a brief urban history and contextual data a description of local government planning activities the current plan the city's political history and transparency in local planning an assessment of planning processes the mechanisms for changing land uses and examples one infrastructure project and enforcement of land use rules and an evaluation of the plan itself including some GIS analysis local zoning and federal policy The book's recommendations fall into three areas making plans into part of an ongoing and iterative process increasing coordination between municipal budgeting and planning and creating transparency and public input to the planning process More specifically we find that new plans often ignore successes and failures of prior plans they do not periodically assess indicators to gauge impact and discretionary changes in between plan updates diminishes the importance of the plan itself In the second area we argue that the scope of planning must be expanded The plan should be integrated with the municipal budgeting process and municipalities in Mexico should work to generate more local revenues to adequately fund plans Finally in the third area we recommend making planning documents zoning maps and basic data on urban conditions accessible to the public A lack of transparency and the often opaque decision making processes harm the legitimacy of governance We also outline how the federal government can play a role in advancing these recommendations for local planning processes *The Hidden Wealth of Cities* Jon Kher Kaw, Hyunji Lee, Sameh Wahba, 2020-02-13 In every city the urban spaces that form the public realm ranging from city streets neighborhood squares and parks to public facilities such as libraries and markets account for about one third of the city's total land area on average Despite this significance the potential for these public space assets typically owned and managed

by local governments to transform urban life and city functioning is often overlooked for many reasons other pressing city priorities arising from rapid urbanization poor urban planning and financial constraints The resulting degradation of public spaces into congested vehicle centric and polluted places often becomes a liability creating a downward spiral that leads to a continuous drain on public resources and exacerbating various city problems In contrast the cities that invest in the creation of human centered environmentally sustainable economically vibrant and socially inclusive places in partnership with government entities communities and other private stakeholders perform better They implement smart and sustainable strategies across their public space asset life cycles to yield returns on investment far exceeding monetary costs ultimately enhancing city livability resilience and competitiveness

The Hidden Wealth of Cities Creating Financing and Managing Public Spaces discusses the complexities that surround the creation and management of successful public spaces and draws on the analyses and experiences from city case studies from around the globe This book identifies through the lens of asset management a rich palette of creative and innovative strategies that every city can undertake to plan finance and manage both government owned and privately owned public spaces
