Bulletin of the Atomic Scientists, 1973-10 The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the *Bulletin's* iconic Doomsday Clock stimulates solutions for a safer world *Bulletin of the Atomic Scientists*, 1961-05 The *Bulletin of the Atomic Scientists* is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the *Bulletin's* iconic Doomsday Clock stimulates solutions for a safer world **Can We Feed the World Without Destroying It?** Eric Holt-Gimenez, 2019-02-25 Nearly a third of the world's population suffers

from hunger or malnutrition Feeding them and the projected population of 10 billion people by 2050 has become a high profile challenge for states philanthropists and even the Fortune 500 This has unleashed a steady march of initiatives to double food production within a generation But will doing so tax the resources of our planet beyond its capacity In this sobering essay scholar practitioner Eric Holt Gim nez argues that the ecological impact of doubling food production would be socially and environmentally catastrophic and would not feed the poor We have the technology resources and expertise to feed everyone What is needed is a thorough transformation of the global food regime one that increases equity while producing food and reversing agriculture s environmental impacts

A billion hungry people Frederic Mousseau,2009 The food price increases of 2007 and 2008 focused attention on a global food crisis that was already affecting more than 850 million people Even before the 2008 food riots some 16 000 children were dying every day from hunger related causes one every five seconds The United Nations Food and Agriculture Organisation FAO estimates that by the end of 2008 rising prices had added 109 million to the ranks of the hungry Today about one in six of the world s population goes short of food almost a billion people Although food prices fell in the final months of 2008 they remain above the long term trend and are likely to do so for the foreseeable future Two growing threats are likely to exacerbate the problem of hunger climate change is increasing the frequency and intensity of hazards such as floods drought and tropical cyclones that destroy crops livestock and livelihoods and the global recession looks set to further increase the number of people going hungry because of its impact on employment incomes and public spending The rapid and unpredictable fluctuations in food prices exacerbated by volatile oil markets and increasing weather hazards are a major challenge Poor consumers in developing countries cannot buy food when prices rise while sharply falling prices can destroy farmers livelihoods and result in uncertainty that deters them from investing in increased production

Ending Hunger Anthony Warner,2022-04-19 Is worldwide famine just around the corner And do I really have to go vegan A provocative vision Sunday Times Nutritionists tell you to eat more fish Environmentalists tell you to eat less fish Apparently they are both right It s the same thing with almonds or quinoa or a hundred other foods But is it really incumbent on us as individuals to resolve this looming global catastrophe From plastic packaging to soil depletion to flatulent cows we are bombarded with information about the perils of our food system Drawing on years of experience within the food industry Anthony Warner invites us to reconsider what we think we know In *Ending Hunger* he uncovers the parallels between eating locally and 1930s fascism promotes the potential for good in genetic modification and dispels the assumption that population growth is at the heart of our planetary woes

World Hunger Frances Moore Lappé,Joseph Collins,2015-10-06 The definitive solutions based book for all those questioning why hunger still exists when there is such an abundance of food The Huffington Post Food Tank s 2015 Recommended Fall Reading List From bestselling authors Frances Moore Lapp and Joseph Collins comes the twenty first century s authoritative book on world hunger Lapp and Collins refute the myths that prevent us from addressing the root causes of hunger across the globe

World Hunger 10 Myths draws on extensive new research to offer fresh often startling insights about tough questions from climate change and population growth to genetically modified organisms GMOs and the role of US foreign aid and more. Brimming with little known but life changing examples of solutions to hunger worldwide this myth busting book argues that sustainable agriculture can feed the world that we can end nutritional deprivation affecting one quarter of the world's people and that most in the Global North have more in common with hungry people than they thought. For novices and scholars alike World Hunger 10 Myths will inspire a whole new generation of hunger fighters. World Hunger should become not only a book for study but a guide to action. Noam Chomsky

How Will We Feed the Hungry Billions Nigel Hey, Science Book Associates Editors, 1971-10

Feeding the World Vaclav Smil, 2001-08-24 A realistic yet encouraging look at how society can change in ways that will allow us to feed an expanding global population. This book addresses the question of how we can best feed the ten billion or so people who will likely inhabit the Earth by the middle of the twenty first century. He asks whether human ingenuity can produce enough food to support healthy and vigorous lives for all these people without irreparably damaging the integrity of the biosphere. What makes this book different from other books on the world food situation is its consideration of the complete food cycle from agriculture to post harvest losses and processing to eating and discarding. Taking a scientific approach Smil espouses neither the catastrophic view that widespread starvation is imminent nor the cornucopian view that welcomes large population increases as the source of endless human inventiveness. He shows how we can make more effective use of current resources and suggests that if we increase farming efficiency reduce waste and transform our diets future needs may not be as great as we anticipate. Smil's message is that the prospects may not be as bright as we would like but the outlook is hardly disheartening. Although inaction late action or misplaced emphasis may bring future troubles we have the tools to steer a more efficient course. There are no insurmountable biophysical reasons we cannot feed humanity in the decades to come while easing the burden that modern agriculture puts on the biosphere.
