

RCU Buttons

As stated above the RCU has 3 setup buttons. These are explained below.

Configuration Button (CFG)

The CFG button is used to configure the BFR (Building, Floor, Room) of the unit. At this time, the BFR is a randomly generated number.

Press and hold the CFG button for 3 seconds, then release. Upon release, the red LED will flash once. Random numbers are generated to make the BFR and these are written to the radio. The radio then transmits an inquire message. If the BFR is already in use by another device in the area, an 'in use' message is received. In this case, a new BFR is generated and an inquire transmitted. This is repeated until no 'in use' transmission is received. If no 'in use' is received, then the BFR is free to use and the red LED will turn on solid.

OB/CB Button

When the *OB/CB* button is pressed, the radio will send the Open Binding message once per second for one minute, or until the *OB/CB* button is pressed again. While the unit is transmitting this message, the green LED will flash once per second.

While the unit is in the open binding mode, wireless devices such as the WDDC can be bound to this RCU.

When either one minute has passed or the button is again pressed, a close binding message is sent and the RCU exits the open binding mode.

Fast Clock Button

The fast clock button is for testing purposes only. When pressed, one second is the equivalent of one minute real time. Because the devices bound to the RCU do not have a fast clock mode, this feature is not recommended for use in the field. It was added only to facilitate testing of the unit in the lab.

Monitoring of Wireless Devices

When the RCU receives status messages from the wireless room devices, the settings are logged in the RCU memory. Anytime the RCU needs to check one of these statuses, it will check its memory to see the latest status from any of the wireless devices.

For example, if the RCU receives a message indicating that motion has been detected, it registers this in its memory. This status will not
