Hannay, 2012-12-06 The last quarter century has been marked by the extremely rapid growth of the solid state sciences They include what is now the largest subfield of physics and the materials engineering sciences have likewise flourished And playing an active role throughout this vast area of science and engineering have been very large numbers of chemists Yet even though the role of chemistry in the solid state sciences has been a vital one and the solid state sciences have in turn made enormous contributions to chemical thought solid state chemistry has not been recognized by the general body of chemists as a major subfield of chemistry Solid state chemistry is not even well defined as to content Some for example would have it include only the quantum chemistry of solids and would reject thermodynamics and phase equilibria this is nonsense Solid state chemistry has many facets and one of the purposes of this Treatise is to help define the field Perhaps the most general characteristic of solid state chemistry and one which helps differentiate it from solid state physics is its focus on the chemical composition and atomic configuration of real solids and on the relationship of composition and structure to the chemical and physical properties of the solid Real solids are usually extremely complex and exhibit almost infinite variety in their compositional and structural features *Practical Druggist and Pharmaceutical Review of Reviews*

Gunther, 2012-12-06 That residues of pesticides and other foreign chemicals in foodstuffs are of concern to everyone everywhere is attested by the reception accorded Volumes 1 and 2 of Residue Reviews and by the gratifying enthusiasm sincerity and efforts shown by the individuals I have asked to prepare manuscripts Many manuscripts on residue affairs are in preparation but the field is so large and the non polemical interests in it so varied that the editor and the Advisory Board will welcome suggestions for topics considered suitable and timely for review in this international book series There can be no serious question that pesticide and food additive chemicals are essential to adequate food production manufacture marketing and storage yet without continuing surveillance and intelligent control some of those that

persist could at times conceivably endanger the public health The object of Residue Reviews is to provide concise critical reviews of timely advances philosophy and significant areas of accomplished or needed endeavor in the total field of residues of these chemicals in foods in feeds and in transformed food products These reviews are either general or specific but properly they may lie in the domains of analytical chemistry and its methodology biochemistry human and animal medicine legislation pharmacology physiology regulation and toxicology certain affairs in the realm of food technology that are concerned specifically with pesticide and other food additive problems are also appropriate subject matter
