Meathooked The History And Science Of Our 25 Million Year Obsession With Meat:

Meathooked Marta Zaraska, 2016-02-23 Explores the world's meat cultures and traditions to share insights into why a craving for animal protein evolved in humans and why vegetarian lifestyles are so difficult to maintain despite health warnings

The Oxford Handbook of Food, Water and Society Tony Allan, Brendan Bromwich, Martin Keulertz, Anthony Colman, 2019-09-27 Food, water and society: what is managed by whom and with what impacts? Our food supply chains are at risk. Water resources, sometimes scarce, often damaged and always under-valued, are among the major reasons why food and water security rank high every year in the World Economic Forum's major global risk analysis. A stable and sustainable food system is critical to society's survival. This Handbook shows that keeping the food system stable comes at the expense of the environment, especially of water resources and those who consume and manage them. The way the food system operates reflects hard political realities. Rather than pay for the environmental costs of sustainable production, society expects food at ever lower prices. Governments reflect their electorates in this regard. Given that farm production may account for as little as 10% of the food value chain in wealthy economies, it is striking that governments have been unwilling or unable to put in place the essential laws and accountability that would enable farmers to ensure both production and stewardship. Corporate food traders, food manufacturers and retailers, on the other hand, operate in markets that make profits and pay taxes. But these corporations are not contractually bound to utilize highly nutritious, sustainably produced food commodities. The articles in this Oxford Handbook have been written by water and food system scientists and professionals, including farmers, rarely heard voices who understand the problems of food producers, food manufacturers and regulating markets and public policy. The articles address the blind spots of society and its public policymakers, demonstrating the importance of informing society about the consequences of its food preferences and the heroic challenges it is beginning to face. The damage we are doing to our water and soil ecosystems is as important as the damage we do to the atmosphere. Impressed by the technical and organizational advances of the past two centuries, the contributors featured in this book also take note of where economic inefficiencies and cultural deadlock in a 4,000-year-old system are putting our critical food supply chains at risk.

Meat Planet Benjamin Aldes Wurgaft, 2020-10-13 In 2013, a Dutch scientist unveiled the world's first laboratory-created hamburger. Since then, the idea of producing meat not from live animals but from carefully cultured tissues has spread like wildfire through the media. Meanwhile, cultured meat researchers race against population growth and climate change in an effort to make sustainable protein. *Meat Planet* explores the quest to generate meat in the lab, a substance sometimes called cultured meat, and asks what it means to imagine that this is the future of food. Neither an advocate nor a critic of cultured meat, Benjamin Aldes Wurgaft spent five years researching the phenomenon. In *Meat Planet*, he reveals how debates about lab-grown meat reach beyond debates about food, examining the links between appetite, growth and capitalism. Could satiating the growing appetite for meat actually lead to our undoing? Are we simply using one technology to undo the damage caused

by another Like all problems in our food system the meat problem is not merely a problem of production It is intrinsically social and political and it demands that we examine questions of justice and desirable modes of living in a shared and finite world Benjamin Wurgaft tells a story that could utterly transform the way we think of animals the way we relate to farmland the way we use water and the way we think about population and our fragile ecosystem s capacity to sustain life He argues that even if cultured meat does not succeed it functions much like science fiction as a crucial mirror that we can hold up to our contemporary fleshy dysfunctions

Food Philosophy David M. Kaplan, 2019-11-19 Food is a challenging subject There is little consensus about how and what we should produce and consume It is not even clear what food is or whether people have similar experiences of it On one hand food is recognized as a basic need if not a basic right On the other hand it is hard to generalize about it given the wide range of practices and cuisines and the even wider range of tastes This book is an introduction to the philosophical dimensions of food David M Kaplan examines the nature and meaning of food how we experience it the social role it plays its moral and political dimensions and how we judge it to be delicious or awful He shows how the different branches of philosophy contribute to a broader understanding of food what food is metaphysics how we experience food epistemology what taste in food is aesthetics how we should make and eat food ethics how governments should regulate food political philosophy and why food matters to us existentialism Kaplan embarks on a series of philosophical investigations considering topics such as culinary identity and authenticity tasting and food criticism appetite and disgust meat eating and techno foods and consumerism and conformity He emphasizes how different narratives help us navigate the complex world of food and reminds us we all have responsibilities to ourselves to others and to animals An original treatment of a timely subject Food Philosophy is suitable for undergraduates while making a significant contribution to scholarly debates

Live Stock and Dead Things Hannah Chazin, 2024-12-20 Reconceptualizes human animal relationships and their political significance in ancient and modern societies In Live Stock and Dead Things Hannah Chazin combines zooarchaeology and anthropology to challenge familiar narratives about the role of nonhuman animals in the rise of modern societies Conventional views of this process tend to see a mostly linear development from hunter gatherer societies to horticultural and pastoral ones to large scale agricultural ones and then industrial ones Along the way traditional accounts argue that owning livestock as property along with land and other valuable commodities introduced social inequality and stratification Against this Chazin raises a provocative question What if domestication wasn t the origin of instrumentalizing nonhuman animals after all Chazin argues that these conventional narratives are inherited from conjectural histories and ignore the archaeological data In her view the category of domestication flattens the more complex dimensions of humans relationship to herd animals In the book s first half Chazin offers a new understanding of the political possibilities of pastoralism one that recognizes the powerful role herd animals have played in shaping human notions of power and authority In the second half she takes readers into her archaeological fieldwork in the South Caucasus which sheds further light on

herd animals transformative effect on the economy social life and ritual Appealing to anthropologists and archaeologists alike this daring book offers a reconceptualization of human animal relationships and their political significance

The Beauty Suit Lauren Shields,2018-05-15 A young feminist finds herself questioning why hotness has become necessary for female empowerment and looks for alternatives Looking good feels good But in a society where looking good is posited as being strong while negotiating for better pay is statistically proven to damage our careers is it fair to say that wicked eyeliner weekly blowouts and a polished Instagram feed are the keys to our liberation If so if hot really is a good enough synonym for empowered why do so many of us feel deep in our bones that the sexy as strong model is a distraction Is pretty still the closest to power women can get Why is looking fierce an acceptable substitute for living in a world where women are safe Inspired in seminary by American Muslimahs who wear the hijab for feminist reasons Lauren Shields took off what she calls the Beauty Suit the done hair the tasteful and carefully applied makeup the tight clothes and foot binding shoes for nine months She d really only wanted to do an experiment Instead her life especially her views on what constitutes liberation changed forever Rooted in feminist theory and religious history and guided by a snappy personal narrative The Beauty Suit unpacks modern American womanhood a landscape where the female body is still so often the battleground for male ideals and where we struggle with our rights as human beings to define and exercise our freedom

Sacred Cow Diana Rodgers,Robb Wolf,2020-07-14 PUBLISHERS WEEKLY BESTSELLER We re told that if we care about our health or our planet eliminating red meat from our diets is crucial That beef is bad for us and cattle farming is horrible for the environment But science says otherwise Beef is framed as the most environmentally destructive and least healthy of meats We re often told that the only solution is to reduce or quit red meat entirely But despite what anti meat groups vegan celebrities and some health experts say plant based agriculture is far from a perfect solution In Sacred Cow registered dietitian Diana Rodgers and former research biochemist and New York Times bestselling author Robb Wolf explore the quandaries we face in raising and eating animals focusing on the largest and most maligned of farmed animals the cow Taking a critical look at the assumptions and misinformation about meat Sacred Cow points out the flaws in our current food system and in the proposed solutions Inside Rodgers and Wolf reveal contrarian but science based findings such as Meat and animal fat are essential for our bodies A sustainable food system cannot exist without animals A vegan diet may destroy more
