Digital Media Use in Early Childhood Lelia Green, Leslie Haddon, Sonia Livingstone, Brian O'Neill, Kylie Stevenson, Donell Holloway, 2024-06-13 The easy interface of touchscreen technologies like

tablets and smartphones has enabled children to access the digital world from a very young age. But while some commentators are enthusiastic about how this can open a new world for fun learning and developing digital skills, others see the dangers of yet more screens, inauthentic play and time spent isolated with electronic babysitters that detract from interaction with parents and learning social skills. Taking five as the age when children transition into formal education, this book draws on a three year research project examining the realities of under six year olds' experiences of these technologies in the UK and Australia. With a theoretical context including Vygotsky, Bruner, Bronfenbrenner and Flewitt, the book examines how parents of young children evaluate the opportunities and risks of children's digital media use in the context of other significant influences such as children's time with grandparents, early childhood care and education. Drawing on in depth interviews with 22 families and rich ethnographic data from observation and exchanges with their 29 children aged four months to five years, the book reveals how digital technologies complement and challenge important aspects of daily life for infants, toddlers and preschoolers.

Surveillance Futures Emmeline Taylor, Tonya Rooney, 2016-08-05 From birth to adulthood, children now find themselves navigating a network of surveillance devices that attempt to identify, quantify, sort and track their thoughts, movements and actions. This book is the first collection to focus exclusively on technological surveillance and young people. Organised around three key spheres of children's day to day life: schooling, the self and social lives, this book chronicles the increasing surveillance that children of all ages are subject to. Numerous surveillance apparatus and tools are examined, including but not limited to mobile phones, surveillance cameras, online monitoring, GPS and RFID tracking and big data analytics. In addition to chronicling the steady rise of such surveillance practices, the chapters in this volume identify and problematise the consequences of technological surveillance from a range of multidisciplinary perspectives. Bringing together leading scholars working across diverse fields including sociology, education, health, criminology, anthropology, philosophy, media and information technology, the collection highlights the significant socio-political and ethical implications of technological surveillance throughout childhood and youth.
