Ming T. Tsuang,Mauricio Tohen,2003-04-14 The new edition of this critically praised text continues to provide the most
comprehensive overview of the concepts methods and research advances in the field It has been revised and enhanced to

Feedstocks for Sustainable Biorefineries Georgios Papadogianakis,Roger Arthur Sheldon,Yulong Wu ,Dmitry Yu.
Murzin,2024-08-23 Today there is growing interest in aqueous phase catalytic conversions for the valorization of renewable
biomass based feedstocks for biorefineries to produce in a sustainable way biofuels chemicals power energy materials
pharmaceuticals and food This is because of the highly polar nature of water which makes it an ideal medium to convert
polar biomass based lignocellulose cellulose hemicellulose lignin with high oxygen content and their upgraded products such
as hydrophilic carbohydrates platform chemicals and their derivatives Another reason which makes water the solvent of
choice is that water itself is involved either as a reagent or as a byproduct even in large amounts in typical conversions for
the valorization of biomass The obtained intermediates further react in the aqueous medium often without any separation
and purification to manufacture more valuable products This results in substantial energy savings lower emissions and
economic benefits Furthermore water could act as a catalyst in conversions of biomass based feedstocks such as in
liquefaction reactions under subcritical conditions Moreover novel types of catalytic reactivity have been observed in the
aqueous solvent not only with water soluble transition metal catalytic complexes but also with conventional heterogeneous
catalysts and catalytic nanoparticles in a broad spectrum of different reactions such as inter alia aldol condensations and
hydrogenation reactions For example in the aqueous phase hydrogenation of the biomass based key platform chemical
levulinic acid into valerolactone and beyond employing heterogeneous catalysts and nanoparticles the presence of water has
a beneficial effect and accelerates the reaction rates whereas in organic solvents much lower activities were observed This
promotional effect of water in the hydrogenation of levulinic acid was proved by many experimental and theoretical studies
using a broad spectrum of different types of catalytic systems **Literary Market Place** ,1999-10 Automotive News
