Compendium of the Microbiological Spoilage of Foods and Beverages William H. Sperber, Michael P. Doyle, 2009-09-23 The increased emphasis on food safety during the past two decades has decreased the emphasis on the loss of food through spoilage particularly in developed countries where food is more abundant In these countries spoilage is a commercial issue that affects the profit or loss of producers and manufacturers In lesser developed countries spoilage continues to be a major concern The amount of food lost to spoilage is not known As will be evident in this text stability and the type of spoilage are influenced by the inherent properties of the food and many other factors During the Second World War a major effort was given to developing the technologies needed to ship foods to different regions of the world without spoilage The food was essential to the military and to populations in countries that could not provide for themselves Since then progress has been made in improved product formulations processing packaging and distribution systems New products have continued to evolve but for many new perishable foods product stability continues to be a limiting factor Many new products have failed to reach the marketplace because of spoilage issues **Microbial Hazard Identification in Fresh**
