three major scientific research areas that contribute to nutraceutical and functional food research for studies of effectiveness and safety

**Aquatic Animal Nutrition** Christian E.W. Steinberg, 2024-11-15 This volume first covers the supplementation of aquafeeds with terrestrial plant material used in human medicine and nutrition. Mainly based on the trial and error approach, many supplements enhance growth, immunity, and resistance to stress. However, other supplements appear to be ineffective, and some have adverse effects. A robust and guiding hypothesis for supplementation is not apparent. Therefore, the book proposes the use of artificial intelligence to end the trial and error phase. In addition, a graded dosing is rarely used, especially in the low dose range, so the physiological mechanisms behind the supplements are often only partially understood. This topic of aquatic animal nutrition is still in its infancy. Chapters cover medicinal plants in general, selected medicinal plants in detail, food plants, fruits, essential oils, fermentation residues, and genetically modified plants. One chapter attempts to answer the question of what mechanism may underlie ineffective or even harmful supplementation. Overall, the importance of the intestinal microflora is becoming increasingly clear and points to the imperative need to include gut microbiota in replacement studies. Based on the few epigenetic studies currently available, the importance of these processes is demonstrated. The need to integrate such approaches into future studies is emphasized. The so-called hologenomics approach is inevitable. Can adverse effects be mitigated by adding functional feed ingredients such as prebiotics or probiotics? This volume concludes with aquatic plants, macroalgae, filamentous algae, and macrophytes as food sources for natural and farmed aquatic animals. Can aquaculture learn from natural aquatic herbivores?

**Dietary Supplements** Johanna T. Dwyer, Paul M. Coates, 2018-06-26 This book is a printed edition of the Special Issue Dietary Supplements that was published in *Nutrients*.

**Dosimetry in Bioelectromagnetics** Marko Markov, 2017-05-23 Dosimetry refers to the calculation and assessment of the radiation dose received by the human body. The proposed book will place emphasis on the existence of physical and biophysical dosimetry. It will be discussed for the proper description and evaluation of the signal at the power generation system. It will cover in detail 10 different parameters of EMF/electromagnetism exposure, such as amplitude, frequency, vector, time of exposure, orientation, etc. In most published papers, these parameters are not well defined.
