digitized world to think that technology is the primary agent of psychological and social change In Interactive Realism Daniel Downes argues that it continues to be people who construct social reality through their interactions critiquing the transformative turn in media studies Distinguishing between the Internet a communication system and cyberspace an environment for human exchange the author provides a framework for exploring the metaphors and images used in cyberspace to represent and model social reality He clarifies how these symbolic interactions are linked to the technologies used to create store and transmit them and to their social context Drawing on examples from digital games web design film and photography the author shows how individual experiences are calibrated by technology and how digital communication contributes to broader processes such as community building and public memory Downes articulates a nuanced form of media ecology that does not focus on a single cause of change but rather on the relationships between embodied experience communication systems and representations Interactive Realism establishes a new method for understanding the importance of digital media to the construction of social reality

Host Cities and the Olympics Harry H. Hiller, 2014 Rather than interpreting the Olympics as primarily a sporting event of international or national significance this book understands the Games as a civic project for the host city that serves as a catalyst for a variety of urban interests over a period of many years from the bidding phase through the event itself Traditional Olympic studies have tended to examine the Games from an outsider's perspective or as something experienced through the print media or television In contrast the focus presented here is on the dynamics within the host city understood as a community of interacting individuals who encounter the Games in a variety of ways through support opposition or even indifference but who have a profound influence on the outcome of the Games as actors and players in the Olympics as a drama Adopting a symbolic interactionist approach the book offers a new interpretive model through which to understand the Olympic Games by exploring the relationship between the Games and residents of the host city Key analytical concepts such as framing dramaturgy the public realm and the symbolic field are introduced and illustrated through empirical research from the Vancouver 2010 Winter Games and it is shown how the social media and shifts in public opinion reflected interaction effects within the city By filling a clear lacuna in the Olympic Studies canon this book is important reading for anybody with an interest in the sociology of sport urban studies event studies or urban sociology

The Media Gaze Augie Fleras, 2011-09-15 While Canada is known for its official commitment to diversity a close look at our media reveals that though they frequently promote superficial representations of difference they actually play a pivotal role in producing and reproducing the values structures and priorities of a predominantly straight white male society The Media Gaze exposes how newscasters advertisers filmmakers and television programmers attempt to co opt audiences into believing that media depictions entail neither prejudice nor perspective In truth the experiences of those who fall outside of the media s preferred populations are actively ignored or misrepresented In this timely audit of the Canadian mainstream media sociologist Augie Fleras draws on compelling case studies to explore the societal implications of the industry s hidden bias He also examines alternative forms of media and media literacy to present readers with tools to challenge the dominant agenda
