Neurology James L. Bernat, Richard Beresford, 2014-01-09 Advances in our understanding of the brain and rapid advances in the medical practice of neurology are creating questions and concerns from an ethical and legal perspective Ethical and Legal Issues in Neurology provides a detailed review of various general aspects of neuroethics and contains chapters dealing with a vast array of specific issues such as the role of religion the ethics of invasive neuroscience research and the impact of potential misconduct in neurologic practice The book focuses particular attention on problems related to palliative care euthanasia dementia and neurogenetic disorders and concludes with examinations of consciousness personal identity and the definition of death This volume focuses on practices not only in North America but also in Europe and the developing world It is a useful resource for all neuroscience and neurology professionals researchers students scholars practicing clinical neurologists mental health professionals and psychiatrists A comprehensive introduction and reference on neuroethics Includes coverage of how best to understand the ethics and legal aspects of dementia palliative care euthanasia and neurogenetic disorders Brings clarity to issues regarding ethics and legal responsibilities in the age of rapidly evolving brain science and related clinical practice Ethical and Legal Issues in Neurology Lois Margaret Nora, 2014-01-09 There is

dynamic interplay between the disciplines of law and ethics and the result is often laws and regulation that impact the practice of clinical neurology This chapter explores how the disciplines of law and ethics inform and intersect with each other and how resulting law impacts the everyday work of the clinical neurologist Examples of how the core bioethical principles of nonmaleficence beneficence respect for autonomy and justice are manifest in legislative common and administrative laws are presented Examples of how these laws in turn impact the practice of neurology through protection of patient privacy the avoidance of conflict of interest and informed consent and other issues are offered Ethical and Legal Issues in Neurology

Amy Y. Tsou, Claire J. Creutzfeldt, James M. Gordon, 2014-01-09 Medical professionalism faces distinctive challenges in the 21st century In this chapter we review the history of professionalism address specific challenges physicians face today and provide an overview of efforts to address these issues including behavioral and virtue ethics approaches First we discuss core features professions share and the development of codes of medical ethics that guide the practice of western medicine Second we address challenges related to the doctor patient relationship continuity of care cultural competence conflicts of interest and the regulation of quality of care through maintenance of certification We then explore three cultural trajectories

that have deeply influenced medical practice the technologic imperative physicians collective neglect of structural factors impacting medicine and the rise of commercialism Finally we describe efforts to address these challenges focusing on the Physician Charter developed by the American Board of Internal Medicine and widely endorsed by medical boards and societies internationally *Ethical Issues in Neurology* James L. Bernat, 2008 Written by an eminent authority from the American Academy of Neurology's Committee on Ethics Law and Humanities this book is an excellent text for all clinicians interested in ethical decision making The book features outstanding presentations on dying and palliative care physician assisted suicide and voluntary active euthanasia medical futility and the relationship between ethics and the law New chapters in this edition discuss how clinicians resolve ethical dilemmas in practice and explore ethical issues in neuroscience research Other highlights include updated material on palliative sedation advance directives ICU withdrawal of life sustaining therapy gene therapy the very low birth weight premature infant the developmentally disabled patient informed consent organizational ethics brain death controversies and fMRI and PET studies relating to persistent vegetative state

The Medico-Legal Development of Neurological Death in the UK Kartina A. Choong, 2022-11-25 Diagnosis of death by neurological criteria DNC is a construct which has been part of the British medico legal landscape for nearly half a century This book examines the factors behind its emergence and discusses the various changes that took place in the last few decades that culminated in the current definition and clinical criteria for determining brain based death It highlights the continuities and discontinuities in practice and the impact they have on the issue of withdrawal of mechanical ventilation in intensive care units and on the field of organ transplantation The book also explores the law's response to the introduction and development of DNC in clinical practice It demonstrates how the legitimacy of the definition and criteria used by the medical profession were forged in the courtroom rather than in Parliament It documents why case law were introduced in court and assesses whether organ donation was a consideration in the deliberations It will be emphasised that courts have given insufficient consideration to requests made in recent cases to consider a broader range of methods to determine death Those pleas were made on the grounds that the definition and criteria used in the UK are dissimilar to those used in other jurisdictions that also adopt DNC and that faith communities have a different understanding of death By taking a close look at those other approaches before highlighting the inherent limitations of the courtroom as the forum that confers DNC its legitimacy the book puts forward the argument that the democratic process should be engaged [The Medical-Legal Aspects of Acute Care Medicine](#) James E. Jox, Ruth J. Horn, Richard Huxtable, 2014-01-09 End of life care practices and attitudes in Europe are highly diverse which is unsurprising given the variety of cultural and religious patterns across this region The most marked differences are in the legal and ethical stances towards assisted dying although there are also variations in limitation of life sustaining treatment and the authority of advance directives to decline such treatment Palliative care has made a rapid and impressive development in many European countries over the last decade and alleviating symptoms at the end of life is permitted even if the drugs used might in the rare case not only relieve suffering but also shorten life Fueled by the politically led process of European harmonization future policies and laws on end of life care might converge However at the base of many ethical conflicts there remain deeply rooted differences about promoting the sanctity of life eradicating suffering and respecting patients autonomous wishes *Neurology for the Non-Neurologist* William J. Weiner, Christopher G. Goetz, Robert K. Shin, Steven L. Lewis, 2012-03-28 This book is a practical guide for primary care physicians psychiatrists and other non neurologist clinicians who encounter patients with neurologic problems The book begins with overviews of neurologic symptoms the neurologic examination diagnostic tests and neuroradiology and then covers the full range of neurologic disorders that non neurologists encounter Chapters follow a consistent structure with key elements highlighted for quick scanning Each chapter begins with Key Points and includes Special Clinical Points Special Considerations in the Hospitalized Patient and When a Non neurologist Should Consider Referring to a Neurologist Each chapter ends with an Always Remember section emphasizing the most important practical issues and a series of self study questions *Ethical and Legal Issues in Neurology* H. Richard Beresford, 2014-01-09 Ethically salient issues in neurologic care may have important legal overtones This chapter considers some of these emphasizing how law may influence the outcome of controversies over how best to promote autonomy beneficence and justice in the care of individuals with neurologic disorders Constitutional statutory and judicial dimensions are addressed With respect to autonomy discussion emphasizes legal dimensions of the doctrine of informed consent and the obligations of medical professionals to protect the

privacy and confidentiality of their patients The discussion of beneficence focuses on issues relating to actual or potential conflicts of interest in the care of patients and on the conduct of research involving human subjects The section on justice considers how law aims to define protectable rights and interests of individuals and to provide a fair and efficient process for resolving disputes Applications of legal principles and doctrines are illustrated primarily through the examples afforded by judicial decisions These cases demonstrate how law both promotes ethical decision making and protects the rights and interests of those affected The cases also highlight some of the ethical quandaries that evoke resort to litigation and the limits of law in advancing ethically appropriate outcomes Neurology and Trauma Randolph W. Evans M.D.,2006-03-16

Disorders due to trauma to the head spine and peripheral nerves are among the most common seen by neurologists and neurosurgeons This 42 chapter book is the comprehensive definitive work on the subject offering coverage on a wide range of clinical issues The second edition features completely new sections on sports and neurologic trauma and iatrogenic trauma to complement existing comprehensive sections on head trauma spinal trauma plexus and peripheral nerve injuries post traumatic pain syndromes environmental trauma and posttraumatic sequelae and medicolegal aspects Twenty two of the first edition s chapters have been revised and updated eight with new coauthors and 20 new chapters have been added

Ethical and Legal Issues in Neurology Eelco F.M. Wijdicks,2014-01-09 The diagnosis of brain death should be based on a simple premise If every possible confounder has been excluded and all possible treatments have been tried or considered irreversible loss of brain function is clinically recognized as the absence of brainstem reflexes verified apnea loss of vascular tone invariant heart rate and eventually cardiac standstill This condition cannot be reversed not even partly by medical or surgical intervention and thus is final Many countries in the world have introduced laws that acknowledge that a patient can be declared brain dead by neurologic standards The U S law differs substantially from all other brain death legislation in the world because the U S law does not spell out details of the neurologic examination Evidence based practice guidelines serve as a standard In this chapter I discuss the history of development of the criteria the current clinical examination and some of the ethical and legal issues that have emerged Generally the concept of brain death has been accepted by all major religions But patients families may have different ideas and are mostly influenced by cultural attitudes traditional customs and personal beliefs Suggestions are offered to support these families *Journal of the American Medical Association* ,1897

Ethical and Legal Issues in Neurology Paul J. Ford,Abhishek Deshpande,2014-01-09 A clear understanding of distinctions and definitions is necessary before determining which types of surgically invasive neuroscience research should be permitted and how the experimental protocols can properly be undertaken A failure to clarify the ethical distinctions in invasive neuroscience research hinders attempts at ethical analysis and guidance At least four main distinctions need to be addressed invasiveness as an important moral characteristic special brain mind related risks research participant selection and ideologic interpretation of human function Harm and not invasiveness is the metric by which to measure the ethical

permissibility of research Because of a class of harms to minds and selves special attention should be paid to value considerations These considerations need to be addressed by researchers funders and review boards to create proper safeguards from conception of research through final application of results *Medicolegal Issues in Neurology, An Issue of Neurologic Clinics, E-Book* Joseph S.
