

GETTING TO KNOW YOUR VEHICLE

Here are some starting tips:

1. Turn off your headlights while you crank the engine. This will reduce the electrical load on your battery and supply extra power to the starter motor.
2. In a cold engine starting situation, when the outside air temperature is below 10 degrees F (-12.2 degrees C) or when the vehicle has been idle for several days, depress the accelerator two or three times before starting.

Engine Block Heater

The optional engine block heater is used to warm the engine coolant which improves starting, provides for faster engine warm-up, and results in quicker response from heater-defroster system. It is recommended for use whenever the outside temperature is 0 degrees F or below (-17.8 degrees C or below). The heater is plugged into a grounded 110 volt outlet (household system) and consumes about 600 watts of power. For best results the heater should be plugged in at least three hours prior to starting. The use of the heater for longer periods of time will not cause the engine coolant to exceed the thermostat setting.

CAUTION—Unplug heater cord and secure it to the vehicle prior to moving the vehicle.

Emissions System

When you take your vehicle to the dealer to be serviced, please do not ask him to modify any part of the emissions control system of your vehicle. Modification of the emissions control system could create liability under Federal law (U.S.) if made prior to the first sale and registration, and under the laws of some states, if made thereafter. Further, Federal law prohibits vehicle manufacturers, dealers and other persons engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles, as well as fleet operations from knowingly removing or rendering an emissions control system inoperative after sale and delivery
