Microbial Quality Of Water Supply In Distribution Systems:

Microbial Quality of Water Supply in Distribution Systems Edwin E. Geldreich, 2020-07-26 Hidden problems buried deep in the pipe networks of water distribution systems are very serious potential threats to water quality. *Microbial Quality of Water Supply in Distribution Systems* outlines the processes and issues related to the degradation of water quality upon passage through networks of pipes, storage reservoirs and standpipes on its way to the consumer. The risks associated with biofilm accumulation, bacteria and other contaminants are discussed in great detail. In addition to its excellent microbiological coverage of organisms in drinking water and biofilms in distribution systems, *Microbial Quality of Water Supply in Distribution Systems* provides clear treatments of the technical and public communication issues most commonly affecting the quality of water and water supply systems. The inclusion of numerous case histories in this new book makes it a complete reference source for anyone concerned with water quality and water distribution systems.

Safe Piped Water R. G. Ainsworth, 2004-08-31 The factors affecting the presence and growth of micro organisms in piped networks are reviewed in this book as are the practices of water supply organisations that can directly or indirectly influence their presence and growth. The information and conclusions are intended for policy makers and those responsible for formulating Water Safety Plans for the supply of drinking water. It is also relevant to engineers and scientists who are responsible for water supply planning, operations and monitoring. The review shows that there are often public health reasons for adopting a more proactive approach to many of the traditional practices used in designing, operating and maintaining distribution networks and to modifying the composition of the water that is fed into the network. Contents include the following topics: The microbiology of piped distribution systems and public health; Composition of treated waters to minimise potential for microbiological changes; Design and operation of distribution networks; Planned maintenance and survey of distribution systems; Precautions during construction and repairs; Small animals in drinking water distribution systems; Risk management for distribution systems.
