Oceans 2020 Science Trends And The Challenge Of Sustainability:

Oceans 2020 John G. Field, Gotthilf Hempel, Colin P. Summerhayes, 2013-04-22 *Oceans 2020* presents a comprehensive assessment of the most important science and societal issues that are likely to arise in marine science and ocean management in the next twenty years. Sponsored by the Intergovernmental Oceanographic Commission IOC, the Scientific Committee on Oceanic Research SCOR, and the Scientific Committee on Problems of the Environment SCOPE, the book brings together the world's leading ocean scientists and researchers to analyze the state of marine science and technology, identify key scientific issues for sustainable development, and evaluate the capability of scientists, governments, and private sector stakeholders to respond to those issues. Topics include basic ocean sciences, pressures on the coastal zone, climate change, and the ocean fisheries and fishery science in their search for sustainability, offshore industries including oil drilling, carbon sequestration, and manganese nodule mining, marine information for shipping and defense. Also included are chapters on cross-cutting issues including operational oceanography, ocean instrumentation, and technology, developing frameworks for cooperation, and capacity building in developing nations. In addition, the book offers an introductory overview and a Vision to 2020 that outlines a path to rational ocean governance. In each chapter, contributors give a brief but comprehensive overview of the subject and then consider what has been achieved in recent years, define the problems, outline solutions, and set forth recommendations on the needs for and directions of ocean science in support of sustainable development for the next twenty years. *Oceans 2020* suggests what can be done about major marine environmental issues through the better development and application of marine science and technology, focusing on the issues that are most closely related to human and sustainable development. It will help guide countries in developing their marine science and technology strategies and priorities and is an essential source of information for policymakers, government officials, resource managers, scientists, the media, and all those concerned with the current and future health of the oceans. *Ocean Sustainability in the 21st Century* Salvatore Aricò, 2015-04-02 Describing the emerging and unresolved issues related to the oceans and the marine environment, this book presents the developments made in marine science and policy since the implementation of the United Nations Convention on the Law of the Sea UNCLOS and implications for the sustainable management of ocean areas and resources. This comprehensive volume also provides a number of scientific, policy, and legal tools to address such issues and to ensure better science-based management of the oceans. Topics covered include the impacts of human-induced climate change on the oceans, the marine genetic resources debate, the current legal framework for the oceans, and a comparative study of the legal issues associated with outer space. Including practical examples and worldwide case studies, this book is a valuable resource for policy makers, students, and academics in marine science and policy, ocean affairs, and the law of the sea. *The Esoteric Investor* Vishaal B. New

Ecoinformatics Tools in Environmental Science Vladimir F. Krapivin, Costas A. Varotsos, Vladimir Yu. Soldatov, 2015-01-24

This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive evolutionary technology of geoinformation monitoring. The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development. In this regard, the crucial global problems concerning the dynamics of the nature-society system are considered and the key problems of ensuring the system's sustainable development are studied. A new approach to the numerical modeling of the nature-society system is proposed and results are provided on modeling the dynamics of the system's characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles, land ecosystems and oceans. The main purpose of this book is to develop a universal guide to information modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions.

Oceans 2020 John G. Field, Gotthilf Hempel, Colin P. Summerhayes, 2002-08. Contains a collection of essays analyzing the state of the world's oceans and identifying key issues for sustainable development.

Marine Science & Technology in China: A Roadmap to 2050 Jianhai Xiang, 2010-08-04. As one of the eighteen field-specific reports comprising the comprehensive scope of the strategic general report of the Chinese Academy of Sciences, this sub-report addresses long-range planning for developing science and technology in the field of marine science. They each craft a roadmap for their sphere of development to 2050. In their entirety, the general and sub-group reports analyze the evolution and laws governing the development of science and technology, describe the decisive impact of science and technology on the modernization process, predict that the world is on the eve of an impending S-T revolution and call for China to be fully prepared for this new round of S-T advancement. Based on the detailed study of the demands on S-T innovation in China's modernization, the reports draw a framework for eight basic and strategic systems of socio-economic development with the support of science and technology, work out China's S-T roadmaps for the relevant eight basic and strategic systems in line with China's reality, further detail S-T initiatives of strategic importance to China's modernization and provide S-T decision makers with comprehensive consultations for the development of S-T innovation consistent with China's reality. Supported by illustrations and tables of data, the reports provide researchers, government officials and entrepreneurs with guidance concerning research directions, the planning process and investment. Founded in 1949, the Chinese Academy of Sciences is the nation's highest academic institution in natural sciences. Its major responsibilities are to conduct research in basic and technological sciences, to undertake nationwide integrated surveys on natural resources and ecological environment to provide the country with scientific data and consultations for government's decision making, to undertake government assigned projects with regard to key S-T problems in the process of socio-economic development, to initiate personnel training and to promote China's high-tech enterprises through its active engagement in these areas.
